

RIOJa

ANNUAL REPORT 2019

CONTROL BOARD
OF THE RIOJA DESIGNATION OF ORIGIN

RIOJa

SABER QUIÉN ERES

In the north of Spain, on either side of the river Ebro and flanked by the mountain ranges of Sierra de Cantabria and Sierra de la Demanda, lies the thousand-year-old wine region of Rioja. For centuries, its exceptional grape growing conditions have made it the quality wine producing region par excellence in Spain, with a pioneering character that has only grown and consolidated over time.

RIOJA

... is genuine

*Winemaking has been and still is the economic driving force of Rioja and a sign of its identity. The genuineness of the bond between Rioja and wine is evident both in its extensive historical heritage and in a pioneering character that educated the palates of generations of wine enthusiasts and opened up international markets. Today, the growing interest in showcasing the terroir and its sustainability marks an exciting new stage for Rioja.

PRESENTATION

I would like to take advantage of this opportunity to convey my affection and respect for everyone who, for whatever reason, feels that Rioja belongs to us all. Our Designation, one of the world's leading winemaking regions, continue to demonstrate that it is a great brand, authentic, honest and diverse, with the ability to move with the times and adapt to constantly evolving consumer and market demands.

This is the ideal time to take stock and set down in this report the conclusions that can be drawn from what has been a transitional year, so that we can stride confidently into this new decade that is just beginning. In 2019, the markets did not make things easy for us. Even so, despite these challenges, our grape growers and winemakers brought their professionalism to the fore and produced what many people are already calling 'THE' Rioja vintage.

Rioja is as diverse as its three zones and 144 municipalities; it is a region that is home to various different micro-climates and soils, which is what makes its wines so distinctive; a region in which grape varieties and wines go beyond fleeting fashions. Rioja is proud of its history and its roots, and has proven to be a bold, pioneering brand that has taken authenticity, honesty and diversity to the very highest level. The turn of the decade is a key moment for consolidating and continuing our hard work, and we will do so by moving forward together. We are ready to deal with any game-changing situations the markets may throw at us, and any challenges or surprises that may arise, such as Brexit and the customs tariffs implemented last year.

The appearance of COVID-19 in China in January 2020 and its recent global spread to so many countries led to the outbreak being classified as a pandemic by the World Health Organization on 11 March. Given the complexity of the markets, due to their globalisation, and the momentary absence of any effective medical treatment against the virus, the consequences for the operations of our wineries and grape growers are uncertain and will depend to a large extent on the evolution and spread of the pandemic in the coming months, as well as on the capacity to react and adapt of all the economic agents affected. For all these reasons, at the time of closing this report it is still too premature to make any detailed assessment or quantification of the potential impact of COVID-19 on the *Denominación de Origen Calificada Rioja* due to the uncertainty of its consequences in the short, medium and longer term. In this respect, there has been a drop in the expected business activity of the industry in terms of sales for the first months of 2020, though it is impossible to assess whether this situation will continue in the future and how long it will last. The General Directorate is constantly monitoring the situation in order to successfully tackle any possible impacts that may occur, whether financial or non-financial.

Finally, the impact of COVID 19 is so important that it requires us to reconsider the work on preparing the new Strategic Plan for the 2020-2030 period that we are currently engaged in, with the participation of all the associations that make up the Control Board and the advice of the consultancy firm KPMG. This includes, as an absolute priority, the need to re-establish the balance between supply and demand and then lay the foundations for the future of our Designation, in which Wine Tourism and Training will continue to be the strategic pillars of this new roadmap. To this end we will need to work on upgrading and specialisation in terms of both the tourism product that has enabled us to consolidate our position as a leading region, with 860,000 visits per year, and an ambitious e-learning platform. The Rioja Wine Academy has started off strongly and promises to become an important facility to host courses on Rioja aimed specifically at the wide range of professionals who operate in the wine industry. The Control Board believes that it is necessary to refocus our promotional activities in both the international and domestic markets with the aim of improving brand perception, particularly in the 30-45 age range.

The 2019 harvest gave a boost to the Control Board's optimism, with 385 million kilos of grapes. It may have been a smaller harvest than usual but was characterised by excellent condition and quality. We believe that the 2019 vintage will set a quality benchmark that will help us to support the strategies to increase the value and perception of Rioja wines. What I am certain of is that we will continue to work in the way we have done so far: in a strong, united manner, with the conviction that our richly diverse region, with all its different areas and municipalities, is what makes our wine such a unique product and hence so famous and respected worldwide.

Fernando Salamero, president of the Control Board

HISTORY

Rioja wines are covered by the oldest Designation of Origin in Spain. The modern Rioja was born in the late nineteenth century, establishing a clear link between the name of a product and the place where it was made. This sparked growing concerns among Rioja's grape growers and winemakers who sought to firmly guarantee the quality and authenticity of the wines produced in the region while protecting its identity against "usurpers and counterfeiters."

These concerns were finally addressed with the official recognition of the Rioja Designation of Origin on 6 June 1925, authorising the use of the word RIOJA as a collective brand to be put on the labels, as well as a special bottle seal. The legal basis for this measure had its precedent in the 1902 Industrial Property Act, which mentioned "indications of provenance" in Title IX.

The Royal Decree of 22 October 1926 created the first supervisory body of the Rioja Designation of Origin, a Control Board whose mandate was to demarcate the Rioja production area, control the issue of guarantee seals and recommend legal measures to be taken against "usurpers and counterfeiters of the Rioja brand." The regulations were approved in February 1928.

The enactment of the Wine Statute on 8 September 1932 provided a new legal framework for the development of designations of origin, most of which were already defined and included in this text. A year later, a Ministerial Order authorised the creation of the second Rioja Control Board with a composition, presidency, functions, etc. in accordance with the guidelines of that Statute.

In December 1944, representatives of grower-winemakers and exporters met in an Assembly promoted by the Trade Union Organisation and requested the creation of the third Control Board, which was proclaimed by Ministerial Order on 24 January 1945. Closely linked to the Haro Oenological Station, whose director was also the Control Board president, the new Board approved its Regulations two years later, although its activities were

quite limited until the mid 1950s.

The enactment of Law 25/70 of 2 December 1970, which approved the Statute on Vines, Wines and Alcohols, and the subsequent creation of a new Control Board marked the beginning of a process to improve control systems which eventually stood among the strictest and most effective in the world.

The renewal of the Control Board in May 1982 (in accordance with the regulations set out in Decree 2004/79, adjusted to the new democratic principles proclaimed by the Constitution) was the beginning a new stage which saw the gradual introduction of a perfectly articulated plan of both qualitative and quantitative controls applicable to both production and sales: vineyard and winery registers, control of growing practices, maximum production yields, an approval process for new wines, monitoring of ageing times and vintages, etc.

At the same time, unlike previous stages, the Control Board increased its budget allocation, infrastructure and staff to meet the demands posed by the strict fulfilment of its purpose, namely defending the designation, controlling and fostering quality and carrying the promotion of the generic Rioja brand. All this was funded with the contributions from grape growers and wine producers, whose representatives have prompted self-controlling regulations that are considerably stricter than those of the European Union.

The culmination of this process came in April 1991, with the awarding of the Calificada attribute to the Rioja Designation of Origin and the enactment of new regulations. This was a recognition of the unceasing efforts by the Rioja wine sector to achieve even higher quality goals and a solid reputation.

In 2004, a new stage started Ministry of Agriculture Order APA/795/2004 of 25 March 2004 amended articles 39, 40, 41 and 42 of the Regulations of the DOCa Rioja approved in Order APA/3465/2004 of 20 October 2004 in order to make it possible "to constitute the Control Board with the same level of representation and accountability as the Rioja Wine Interprofessional Organization, in accordance with the eighth additional provision of the Spanish Vine and Wine Act, in addition to introducing the necessary changes in its functions and form of operation."

The passing on 12 May 2015 of Act 6/2015 on Designations of Origin and Protected Geographical Indications of supra-regional territorial scope required the

Rioja Wines are covered by the Oldest Designation of Origin in Spain. The official recognition of the Rioja Designation of Origin took place on 6 June 1925.

drafting of new Articles. On 5 June 2017, the Ministry of Agriculture and Fisheries, Food and the Environment approved the Articles of the Control Board of the Denominación de Origen Calificada Rioja, through Order APM/544/2017. These Articles, together with the Designation Specifications (PDO-ES-A0117) replace the previous Regulations of the DOCa Rioja.

COMPOSITION AND FUNCTIONS

The Plenary of the Control Board is the managing body of the wine region, appointed and supervised by the Ministry of Agriculture, Fisheries and Food (MAPA). It consists of 32 members representing six winemaking and nine grape-growing associations (i.e. all the associations in the Rioja wine industry) and they are the same individuals constituting the Board of Directors of the Rioja Wine Interprofessional Organization, whose President is also the President of the Control Board, pursuant to current regulations. Also members of the Plenary, although without the right to vote, are the representatives of the Ministry of Agriculture, Fisheries and Food and of the Public Administrations of the Autonomous Communities of La Rioja, the Basque Country and Navarre.

Articles 4 and 5 of the Articles indicate that the Control Board is responsible, among others, for the following purposes and functions: defending the Calificada Designation of Origin; fostering the quality of certified wines; promoting and disseminating the certified product; instituting actions in and/or out of court to defend the protected name against its illegitimate use and against actions that constitute unfair competition or other improper uses; proposing modifications to the Designation Specifications; keeping official records and internal records; reporting to the Spanish Ministry of Agriculture, Fisheries and Food any practices not conforming to the provisions of the Designation Specifications and current legal regulations; rating each vintage or harvest; drafting and approving its operating articles and their modifications; setting maximum production allowed per hectare and maximum grape-to-wine ratio annually; approving the standards for the harvest; issuing certificates of origin on request; setting the minimum requirements that must be met by the commercial labels of certified products; managing and issuing back labels, seals and other guarantee markers; checking on compliance with the Designation Specifications; monitoring compliance with these

Articles; preparing and approving the annual budgets of income and expenses, as well as their accounts and budget settlements; and agreeing and demanding compulsory fees from registered members.

Regarding the functions to be performed by the president of the Control Board which, as envisaged, “is the president of the Board of Directors of the Interprofessional Organization and who, according to its Articles, may be a member of the Board or a person external to it”, in Article 9, the position is attributed the legal representation of the Control Board before all other entities and any other as may be delegated by the Plenary. Functions include calling and setting the agenda of the Control Board Plenary Sessions; chairing both Plenary Sessions and meet-

The Control Board Plenary is the managing body of the wine region, appointed and supervised by the Ministry of Agriculture, Fisheries and Food (MAPA).

ings of the Standing Committee, organising discussions and voting; ensuring compliance with the decisions that are taken and endorsed in the minutes of the meetings, issuing the certifications of the decisions reached; ensuring the coordination and rapprochement among associations, and carrying out any other function expressly attributed to the position by Law, the Articles or the Plenary.

With regard to the operating structure set out in Article 16, the Board is to meet at least once every two months and whenever the president deems it necessary or it is requested by at least 15% of voting representation. Decisions require a minimum of 75% of votes present or represented and at least 50% of the votes of each professional sector. The president does not have a casting vote. Exclusively will be bear issued votes. To determine the representation of cooperatives, a weighting factor is applied that takes into account both accredited planted surface area and marketed volume.

COMMITTEES

The Control Board has a Standing Committee and six working committees:

1. **The Standing Committee** sets the agenda for plenary sittings and deals with any procedural or urgent issues that may arise between one plenary sitting and the next and carrying out tasks assigned or delegated by the Plenary.

2. **The Regulations Committee** studies amendments to the Designation of Origin Regulations and all the legal questions that are put before the Council.

3. **The Technical and Control Committee** studies and proposes the appropriate measures to exercise control and enforce Regulations.

4. **The Administration, Personnel, Finance and Internal System Committee** puts together the Board's budget and deals with matters related to the administration of budgetary funds and personnel.

5. **The Promotion Committee** proposes programmes of action for the Board to the Plenary in the areas of communication and promotion.

6. **The Strategic Plan Analysis and Development Committee** was created in 2008 to keep track of the Rioja 2005-2020 Strategic Plan.

7. **The Zones and Municipalities Committee** has been created in this mandate to address issues related to the development of "vinos de zona" and "vinos de municipio".

These committees meet periodically to deal with matters within their area of responsibility and submit proposals to the Plenary for approval.

CONTROL BOARD STRUCTURE AND ORGANISATIONAL CHART

- HIERARCHICAL AND FUNCTIONAL ACCOUNTABILITY
- - - -> COORDINATION, HIERARCHICAL AND FUNCTIONAL INDEPENDENCE REGARDING INSPECTION AND CONTROL.
-→ FUNCTIONALLY ACCOUNTABLE TO MINISTRY REGARDING INSPECTION AND CONTROL.

The Control Board consists of the Control Board Plenary, the Standing Committee and working committees, the president's office, as well as the General Secretariat-Directorate and the Marketing & Communication, Administration and Legal departments. The Control Department is composed of the Empowered Overseers Service. Its Director is independent of the General Secretary-Director, and therefore of the Plenary, with regard to fulfilling inspection and control functions, for which the Director reports directly to a representative of the Ministry of Agriculture, Fisheries and Food.

MANAGEMENT BODY

It consists of the Control Board Plenary, Standing Committee and working committees, President's Office, as well as the General Secretariat-Directorate and the Marketing and Communication, Administration and Legal departments, except the Empowered Overseers Service, which is a completely independent department carrying out inspection and control tasks.

Control Board Plenary

It is comprised of the same members and voting percentages as the Board of Directors of the Rioja Wine Interprofessional Organization, and it is appointed by

the Spanish Ministry of Agriculture, Fisheries and Food (MAPA). It is responsible for setting out the policy of the wine region, which is based on two pillars: promotion and focusing on markets; and development and production and quality controls. It establishes guidelines, approves rules and regulations and develops general policies from the proposals submitted by the committees. Also present in the Plenary meetings (although without voting rights) are the General Secretary-Director, a representative of each of the Autonomous Communities and a representative of the Ministry. When matters affecting particular departments have to be discussed, the heads of these departments may be required to attend.

The Plenary is responsible for setting out the policy of the wine region, which is based on two pillars: promotion and focusing on markets; and development and production & quality controls.

President

The President of the Rioja Wine Interprofessional Organization. Highest representative of the Control Board. Institutional and legal representation functions before any third party and any other representation delegated by the Plenary. The President calls meetings, establishes the agenda based on working committee requests, and chairs the meetings of the Plenary and of the Standing Committee, determining when discussions and voting should take place. The President ensures compliance with decisions made and endorses the minutes of the meetings, as well as certifications relating to the decisions reached. The President seeks to coordinate associations and strengthen their mutual ties. The president is awarded the necessary powers to enter into contracts as set out in the contracting procedures-manual and established spending levels.

Standing Committee

Its functions are also defined in the Articles. It has no executive power, except when delegated by the Plenary, and it is composed of the Control Board President, the chairs of each of the committees and a maximum number of members based on the representation of each association. The General Secretary-Director and the heads of the departments affected by items on the agenda also attend the commission.

Working Committees and Committee Chairs

They are non-executive committees which initially examine matters and proposals to be dealt with by the Plenary. Their chairs are elected from among the members of the Plenary. They call and moderate discussions in their respective commissions. They work in coordination with the General Secretary-Director and with the department heads who are also the secretaries of their respective committees. Committee chairs jointly decide with the General Secretary-Director and the Control Board Pres-

ident whether matters should be referred to the Standing Committee and, as the case may be, to the Plenary. They may represent the Control Board in matters regarding the area of responsibility of their committee.

General Secretary-Director

The Control Board's chief executive, carrying out the normal tasks that would be carried out by the general director or general manager in a company. Ultimately, it is a question of making effective the delegation of management functions, taking on the responsibilities of the Board's day-to-day business. The General Secretary-Director is subject to the Plenary and reports to the President. In general, the General Secretary-Director's responsibilities include: supervising promotion campaigns; organising the staff in all its aspects; preparing submitting and monitoring budgets and financial statements; coordinating departments and, in particular, ensuring that the Legal Department and Administration Department provide the necessary means to the Control department according to the budgets established for the Board every year. Annual targets are set by the Plenary and the General Secretary-Director makes a proposal to the Plenary on the annual objectives to be met by department heads.

CONTROL DEPARTMENT

Consisting of the Empowered Overseers Service. Its Director is independent of the General Secretary-Director, and therefore of the Plenary, with regard to fulfilling inspection and control functions, for which the Director reports directly to a representative of the Ministry of Agriculture, Fisheries and Food.

DEPARTMENTS

- Administration
- Marketing & Communication
- Legal Department

Operation

The heads of the Administration, Marketing & Communication and Legal departments report to the General Secretary-Director, who is their hierarchical and functional supervisor. Obligations include the fulfilment of annual goals approved by the Plenary or the Standing Committee to ensure the proper operation of each Department and their staff, as well as coordination with other departments.

PLENARY SESSION OF 08-02-2019

OEMV Board of Trustees.

The Plenary unanimously agreed to renew the Control Board's membership of the Board of Trustees of the Spanish Wine Market Observatory (OEMV) in 2019 under the same conditions agreed for previous years, with the inclusion of two suggested improvements. These improvements consist of the dissemination by the OEMV of the headlines arising from each quarterly report, and the production of a more comprehensive report at the end of the year, providing comparative data for regions with tariff identification and extending to additional markets beyond the 12 regions of reference. The OEMV is carrying out a comprehensive quantitative study, within its remit, of the 12 main foreign destinations for Rioja in quarterly terms, to be presented along with other information of interest at an annual seminar organised by the OEMV.

Closing of the 2018 financial year

It was unanimously agreed to empower the Administration, Personnel, Finance and Internal System Committee to make the necessary transfers of budgetary items from the 2018 financial year in order to close it, subject to subsequent Plenary approval.

Replacement of board members

The Plenary was informed of the replacement of Mr. Jesús Martínez-Bujanda Mora by Ms. Ana Martínez-Bujanda Mora as one of the GRUPO RIOJA representatives on the Regulations Committee.

PLENARY SESSION OF 01-03-2019

Audit report.

The 2018 audit report was submitted and revealed no questionable issues following a very thorough verification, according to which the accounts convey the true picture of the Control Board's assets and accounting. Consequently the Plenary agreed to the implementation of the 2018 Budget and proposal for closure raised by the Administration, Personnel, Finance and Internal System Committee.

Residual Budget for 2018

Unanimous agreement was reached on expenditure

amounting to €15,231,746.24 of the 2018 Budget, which implies an under-expenditure of €1,350,052.40. A final unappropriated surplus of €1,284,100.43 was calculated, once the variations in income had been computed together with additional revenue, which by virtue of observing the same proportion used for collecting, resulted in the allocation of up to €543,733.10 to the producing sector and €740,367.33 to the commercial sector when applied to fund the 2019 budget.

Revenue budget.

The majority agreed to a Revenue Budget to cover the Ordinary and Additional Expenses for 2019 of €6,584,105.22, divided between the producing sector and the commercial sector by 25.5% and 74.5% respectively, amounting to €5,111,357.22 and €1,472,748.00 (50% each), thus concluding overall contributions to expenses of 30.98% and 69.02% respectively; in other words, €2,039,770.09 from the producing sector and €4,544,335.13 from the commercial sector, once the unappropriated surplus of €775,786.84 had been applied, divided into €262,271.20 for the producing sector and €513,515.64 for the commercial sector, with proposed collection rates of 0.4211% on plantations, assigning a value of €0.90 per kilo of grapes produced, and a collection rate of 0.2757% on protected wines, with these being valued based on their sales at a rate of €3.25 per litre for unaged wine, €4.43 per litre for Crianza wine, €6.50 for Reserva wine and €12.37 for Gran Reserva wine. In all cases, calculations are based on protected production volumes and the sales of bottled and labelled wines in the financial year of 2018.

Replacement of board members

The following board member appointments were noted: Mr. Ignacio Gil Orive replaces Mr. David Puras Martínez as one of the ARAG-ASAJA representatives on the Regulations Committee; Mr. Carlos Manuel Díaz García replaces Mr. Raúl Arias Casares as one of the GRUPO RIOJA representatives on the Regulations Committee; and Ms. Ana Martínez-Bujanda Mora replaces Mr. Jesús Martínez-Bujanda Mora as one of the GRUPO RIOJA representatives on the Zones and Municipalities Committee.

Funding of the Promotional Budget. (PLENARY SESSION OF 01-03-2019)

It was agreed by majority to fund the Budget for Extraordinary Promotional Expenses with an amount of €9,994,952.00, at 50% from each sector, with the decision to maintain this after the application of the unappropriated surplus of €508,313.59. Of this figure, €281,461.90 corresponds to the producing sector and €226,851.69 to the commercial sector respectively, and 50% of the CMO contingency funds receivable, at the same share-out valuation indexes as those used for the Ordinary and Additional Budget; (i.e. €0.90 per kilo of grapes produced, €3.25 per litre of unaged wine, €4.43 per litre of Crianza wine, €6.50 per litre of Reserva wine, and €12.37 per litre of Gran Reserva wine). In all cases, calculations are based on protected production volumes and sales of bottled and labelled wines in the financial year of 2018. It was concluded that the collection percentages levied would be fixed at 0.8298% on plantations and 0.3007% on protected products.

PLENARY OF 12-04-2019

Rating of the 2018 vintage

It was unanimously agreed that the rating for the 2018 vintage should be Good. The Control Board Plenary gave a very positive assessment of the high quality of white wines from this vintage, particularly the character and personality of the native Rioja varieties.

Institutional wines

The Plenary was informed of the seven wines selected by the Tasting Committee for the institutional events organised by the Board during the year. The wines were chosen by blind tasting from the 207 wines of the 70 wineries that participated in the competition held for this purpose, and are a good representation of the diversity of the Rioja wine scene. Although the wines are presented with specially-designed Control Board labels for each category, since 2018, the name of the winery has also ap-

peared on the label and both the Control Board and the winery can publicise this fact.

- Young White Wine 2018: Juan Luis Quiroga de Pablo, Azofra (La Rioja).
- Barrel-fermented White Wine 2017: Bodegas Sonsierra, S. Coop., an Vicente de la Sonsierra (La Rioja).
- Young Rosé Wine 2018: Bodegas y Viñedos Ilurce S.A.T., Alfaro (La Rioja).
- Young Red Wine 2018: Bodegas del Medievo, S.L., Aldeanueva de Ebro, La Rioja.
- Crianza Red Wine 2016: Bodegas Ramírez, S.L., San Vicente de la Sonsierra (La Rioja).
- Reserva Red Wine 2015: Bodegas Ramírez, S.L., San Vicente de la Sonsierra (La Rioja).
- Gran Reserva Red Wine 2009: Bodegas Perica S.L., San Asensio (La Rioja).

PLENARY SESSION OF 31-05-2019

Regulations for Rioja wine labels

The Plenary unanimously agreed to modify the minimum wine label requirements governing wines protected by the DOCa Rioja in accordance with the Protected Designation Specifications and Article 17.h) 4 of Act 6/2015 of 2 May 2015 on Designations of Origin and Protected Geographical Indications of supra-regional territorial scope, notwithstanding any regional or national mandatory labelling provisions, establishing a transitional period up to 31 December 2019 in order to use up the stocks of labels that do not meet the established requirements. The regulations are set out in detail in the following link: <https://www.riojawine.com/es-es/requisitos-de-etiquetado/> on the Control Board's website www.riojawine.com.

The purpose of these modifications is so that wineries can provide consumers with additional information on their labels concerning the vineyard and its production methods, but only when this information can be corroborated by traceability. Some of the most notable information includes:

- 'Madurados en bodega' (winery-matured) wines. This expression may not be used in combination with drawings, expressions or mentions relating to barrels, oak or wood, nor may terms such as 'envejecido' or 'aged' be used in the labels of these wines.
- 'Ediciones o colecciones seleccionadas y limitadas' (selected and limited editions or collections). This term should describe what the collection, selection or edition consists of, as well as the total volume of the lot. Inclusion is optional.
- 'Viñas viejas, centenarias o prefiloxéricas' (old, century-old or pre-phyloxera vines/vineyards). These terms may be used provided that a minimum age of 35 and 100 years can be demonstrated for old and century-old vines/vineyards, respectively, while vineyards must be proven as existing before 1900 for the term pre-phyloxera to be used. At least 90% of the grapes used to make the wine must come from these vineyards.
- 'Viñedos de altura' (High altitude vineyards). Proof must be provided that the minimum altitude of the vineyard is 550 metres above sea level and that at least 90% of the grapes used to make the wine come from those vineyards.
- 'Viñedos propios' (estate-owned vineyards or own vineyards). Evidence must be provided that the wine comes from vineyards owned by the winery (or business group that owns the facilities) or that the winery has had the exclusive production rights over the vineyard, by means of any accepted legal title, for an uninterrupted period of no less than 10 years. At least 90% of the grapes used to make the wine in question must come from these vineyards.
- 'Embotellado en la propiedad' (estate bottled, bottled on the property). This term may only be used when the brand is owned by the winery or business group that owns the facilities.
- 'Nuevas elaboraciones con lías, hormigón, tinajas de barro' (New vinification with the lees, in concrete, or in clay/earthenware/terracotta jars). These winemaking terms may be used when it can be demonstrated through traceability that the wines have been made in this way. It excludes the term 'madurado' (matured).
- The term 'cosecha' (vintage) must always be accompanied by the year.

No expressions may predominate over the exclusive distinctive sign of the brand, or the name of the Designation, or any traditional term appearing immediately below it. Terms referring to the sensory qualities of the wine are not considered to be authorised mentions. Soil conditions

may be mentioned on the informative back label.

Once the latest amendments have been included, the approved regulations provide for a dynamic review procedure every six months from the date they go into force, or earlier if requested, for the inclusion or implementation of the terms mentioned above, or others, by the Control Board, provided that they do not confuse the consumer, particularly in relation to traditional terms or those referring to the origin of the vineyard.

Changes to the ageing periods for white and rosé wines

The Plenary ratified a shortening of the ageing time required for the use of the traditional term 'Crianza' for white and rosé wines, which is now set at a minimum of 18 months. Ageing in 225-litre oak barrels should take place continuously, without interruption, for at least six months, followed and complemented by a minimum of 18 months of bottle ageing. This update will enable the wines to be released on the market earlier, as well as allowing for better differentiation of wines labelled as 'Reserva', and also dovetails with the national definition to ensure compliance with the applicable legal framework.

Limitation of liability.

The Plenary unanimously agreed to remove the limited liability clause envisaged in contracts signed between wineries and the Control Board for certification of compliance with the EN-UNE ISO/IEC 17065:2012 standard

Changes to board members.

The Plenary was informed of the replacement of Mr. Javier Aldana Espinosa by Mr. Alfredo Sánchez Sodupe as one of the FECOAR representatives on the Strategic Plan Analysis and Development Committee, and the appointment of Mr. Luis Martínez Lacuesta Verde as the ABC representative on the Zones and Municipalities Committee, who also replaces Ms. Jiménez Díaz on the Standing Committee.

PLENARY SESSION OF 17-07-2019

'Harvest Season Standards' for the 2019 harvest.

The DOCa Rioja Specifications, PDO-ES-A0177, state that the Control Board lays down the Harvest Season Standards that determine, among other aspects, the need to guarantee the optimisation of wine quality, the prop-

er use of Grape Grower's Cards, and compliance with the maximum permitted production and the maximum grape-to-wine ratios for each harvest. In turn, Article 21 of Act 6/2015 states that for every single production and processing stage, operators must set up a documented self-monitoring system for all the production processes carried out under their supervision to ensure compliance with the Designation Specifications governing the products in question.

The 2019 harvest standards included, among other new features, the entry into the winery of a yield-per-hectare of up to 7,150 kg for red varieties and 9,540 kg for white varieties. The maximum yield subject to protection for the harvest had already been set by the Plenary in October 2018, when a maximum of 6,565 kg per hectare was agreed for red varieties (5,000 kg/ha for Viñedos Singulares). Of the remaining 585 kg (9%) up to the maximum permitted entry into the winery, grape growers had the option of establishing a qualitative stock by mutual agreement with the winery to which the grapes are delivered. In the case of white grapes, the maximum yield subject to protection was 9,090 kg per hectare (6,922 kg/ha for Viñedos Singulares). Wines made with the remaining 450 kg (5%) were not eligible. With regard to the grape-to-wine ratio, this was set at 71 litres of wine per 100 kg of grapes, with a maximum yield limited to 65% for wines

from Viñedos Singulares and 62% for quality white and rosé sparkling wines.

The Harvest Season Standards also note that the types of wine protected by the DOCa Rioja are red, rosé and white, as well as sparkling wine, and it is expressly forbidden to mix any of these types of wine to obtain a type different to any of the blends. Likewise, the maximum percentage of white grapes permitted in the vinification of red wines was established at 5% in the case of destemmed grapes and 15% in the case of whole grapes, while for making rosé wines the maximum white grapes was set at 75%. The minimum requirements in terms of colour intensity and polyphenol index for red wines under the protected designation is another of the many issues regulated by the Control Board, and are referred to in the Harvest Season Standards, the full contents of which can be consulted on the Control Board's website: (<https://www.riojawine.com/es-es/consejo-regulador-doca-rioja/legislacion/normativas/circular-4-2019-normas-campa-na-vendimia/>).

Qualitative Stock of the 2019 vintage.

The changes to the qualitative stock system, as a result of operational improvements stemming from the experience of the first year of its application, were unanimously approved. For 2019 it was decided that this will only apply to red grapes and that it will be set up in a single winery. The grape grower and the winery must formalise their agreement and submit the document before making the Production Declaration, at the very latest by 15 November. The qualitative stock concept is a new system that operates at individual, collective and qualitative levels, im-

proving the system already implemented by the industry in 2007, and is provided for in the DOCa Rioja Designation Specifications. In this second stage, the system was implemented in the 2018 harvest for the first time in Spain. It must be expressly agreed to and reflected in the grape sale and purchase agreement between the grape grower and the winery operator.

DOCa Rioja Designation Specifications

The Plenary unanimously approved the clarifications requested in relation to the Single Document and the concordant changes to the Designation Specifications, a regulation that establishes the requirements to be met by wine covered by this PDO, published by the European Commission in the E-Bacchus register under file number PDO-ES-A0117, defining certain matters at the request of the competent authority. The Ministry's requirements referred to a number of issues, such as the description of quality sparkling wines (white or rosé), the description of the interrelationship between natural and/or human elements and the characteristics of Rioja wines, and the obligation to bottle them in the defined geographical area.

Documents for certification

The Plenary unanimously approved the new models of the documents to be used for certification (application, contract, PG-10 Certification Procedure, PG-7 Complaints and Appeals Procedure and PG-13 Classification Procedure) which are essential for any winery that wishes to market its wines under the Rioja brand to obtain the relevant guarantee of origin documents. The purpose of the contract that has to be signed with the Control Board

is the provision of certification services by this body, which the Ministry of Agriculture, Fisheries and Food has authorised as the competent Control department to verify compliance with the DOCa Rioja Designation Specifications (Article 5.14 of the Control Board's Articles of Association, approved by Order APM/544/2017 of 5 June 2017).

PLENARY SESSION OF 06-09-2019

Hiring of auditors

It was unanimously agreed to appoint EUDITA AUDITEBRO S.A. to do a complete audit of the 2019 annual accounts for a fee of €6,915.15.

DOCa Rioja Designation Specifications

It was unanimously agreed to modify the Designation Specifications with reference to the demarcation of the geographical area, adding: "recognised viñedos singulares are demarcated in the Appendix of Order APA/816/2019 of 28 June 2019"; and also with regard to labelling, adding: "without prejudice to the foregoing, compliance will be mandatory with the minimum labelling requirements set out in accordance with Article 17.h) 4 of Act 6/2015 of 12 May 2015 on Designations of Origin and Protected Geographical Indications of supra-regional territorial scope." The correction of errors in the text of the Designation Specifications regarding the minimum labelling requirements was also approved.

Budget for the Strategic Plan

It was unanimously agreed to increase by €110,000 the budgetary provision to create a Strategic Plan for Rioja Wine for the 2020-2030 period, to be funded by the savings made from other non-actioned items in the budget.

PLENARY OF 21-10-2019

Outsourcing for the new Strategic Plan

It was unanimously agreed to appoint KPMG to draw up a Strategic Plan for Rioja Wine for the 2020-2030 period for a fee of €216,590.

Following the completion of the Strategic Plan for Rioja Wine 2005-2020, the DOCa is once again drawing up a roadmap with a 2030 horizon. This new Plan will

be developed with the aim of creating recognition and value and will incorporate new elements such as sustainability, all geared towards guaranteeing Rioja's success in the future.

PLENARY OF 28-10-2019

Increase in vineyard plantings deferred to 2021

Having met in an extraordinary session, the Plenary adopted the agreement on plantations, the full text of which is reproduced in the attached box.

PLENARY OF 20-12-2019

Budget of €16,717,062 for 2020

The Control Board Plenary unanimously approved a budget of €16,717,062 for the 2020 financial year, together with the distribution of expenses between the producing and commercial sectors and the formalisation, with Caja Rural de Navarra, of the corresponding exchange rate insurance for the harvests in US dollars and pounds sterling. The distribution of the Expenditure Budget for 2020 is funded entirely by the industry (with the exception of the CMO funds) which means that 57.8% is paid by the wineries and 42.2% by the growers.

Request of CMO funds for promotion.

It was unanimously agreed to submit a request to the Wine CMO for co-financing with Community funds for the period from 1 May 2020 to 20 April 2021 with respect to a promotional spend that, in terms of the Control Board's budget, will amount to €2,472,580 in the United States, €505,755 in Mexico, €618,145 in Switzerland, €1,236,290 in China, €269,736 in Russia and €500,136 in Canada. It was also unanimously agreed to give the President the power to formalise all the relevant procedures for this purpose.

Labelling regulations

As a result of the six-monthly review previously agreed to, the Plenary agreed to update the document containing the minimum requirements for labelling wines protected by the DOCa Rioja in accordance with the Designation Specifications and Article 17.h) 4 of Act 6/2015 of 12 May 2015 on Designations of Origin and Protected Geographical Indications of supra-regional territorial scope.

Planting agreement 2020: (PLENARY OF 28-10-2019)

Increase in plant mass

Firstly, during the period in question, the hectares to be distributed are those resulting from the agreement of the previous period (2016-2018), i.e. those deemed to be suspended by the Administration or whose distribution was deferred due to disagreement with the distribution criteria set for 2018 (387). The total figure must be notified by 30 September 2019. If it is finally decided to maintain the distribution of part of the suspended plantations, either through administrative channels or the courts, the equivalent area will automatically be deducted from the next distribution, even if it falls outside the period of the current agreement.

2019. The increase in production potential will be 396 ha (0.6% of 65,971 ha*) . If cumulative sales by 31 August 2019 reach a minimum increase of 5.5 million litres with respect to cumulative sales on 31 August 2018, the increase in production potential will be 0.8% over 65,971 hectares. This is an absolute value of 528 hectares. If cumulative sales by 31 August 2019 reach a minimum increase of 11 million litres with respect to cumulative sales on 31 August 2018, the increase in production potential will be 1% over 65,971 hectares. This is an absolute value of 660 hectares.

Authorisations to replant vineyards grubbed up outside the DOCa Rioja production zone will be restricted, as will authorisations to plant vineyards as a result of the conversion of planting rights from outside the DOCa Rioja production zone to 0 hectares.

To offset the short-term need for raw materials, the Harvest Season Standards for the 2019 harvest

will set a production yield of 101% and a grape-to-wine conversion ratio of 71%.

2020. The increase in production potential will be 396 ha (0.6% of 65,971 ha). If cumulative sales by 31 August 2019 reach a minimum increase of 5.5 million litres with respect to cumulative sales on 31 August 2018, the increase in production potential will be 0.8% over 65,971 hectares. This is an absolute value of 528 hectares. If cumulative sales by 31 August 2019 reach a minimum increase of 11 million litres with respect to cumulative sales on 31 August 2018, the increase in production potential will be 1% over 65,971 hectares. This is an absolute value of 660 hectares.

Authorisations to replant vineyards grubbed up outside the DOCa Rioja production zone will be restricted, as will authorisations to plant vineyards as a result of the conversion of planting rights from outside the DOCa Rioja production zone to 0 hectares.

2021. The increase in production potential will be 396 ha (0.6% of 65,971 ha*) . If cumulative sales by 31 August 2019 reach a minimum increase of 5.5 million litres with respect to cumulative sales on 31 August 2018, the increase in production potential will be 0.8% over 65,971 hectares. This is an absolute value of 528 hectares. If cumulative sales by 31 August 2019 reach a minimum increase of 11 million litres with respect to cumulative sales on 31 August 2018, the increase in production potential will be 1% over 65,971 hectares. This is an absolute value of 660 hectares.

Authorisations to replant vineyards grubbed up outside the DOCa Rioja production zone will be re-

stricted, as will authorisations to plant vineyards as a result of the conversion of planting rights from outside the DOCa Rioja production zone to 0 hectares.

Distribution of surface area

The maximum eligible area per applicant is set at 1 hectare. It was agreed to report favourably on the requirement, for natural persons only, that the applicant must have been working under the Farmers' Social Security Scheme for at least two years within the five-year period leading up to the application. In order to achieve a more socially fair distribution of the area, the zone pending from the previous period (2016-2018) will be distributed in 2021, as well as to the area corresponding to the years 2019, 2020 and 2021 of this agreement. If, for any reason (national restrictions on distribution, limits on the maximum area per applicant, etc.), the planned area is not fully distributed in 2021, it will be included in the distribution for the following year (2022), and so forth until the entire area agreed for this period has been distributed.

Other agreements

- A commitment was made that the vast majority of the distributed hectares would be planted within the first year of their distribution.
- A study will be drawn up in order to define the technical criteria for the 'unsuitability' of certain lands, in which new vineyard plantations within the scope of the Designation will not be permitted.
- A commitment was also made to study and implement effective measures to improve the value of Rioja wines during this three-year period.

The updated document can be found at the following link: <https://www.riojawine.com/es-es/requisitos-de-etiquetado/> on the Control Board's website: www.riojawine.com.

In essence, the first part of the document details everything relating to compulsory particulars: categories, bottler's details, registered marks, rated volume, the Rioja perforated stamp, and the rules of representation: "mandatory information which must appear in the same visual field that does not exceed 11 cm in width". The second part details the requirements for the use of optional particulars, which includes the following: zones; municipalities; viñedo singular; quality sparkling wine; vintage year with optional mentions of ageing; mentions of the method of vinification or production; terms such as 'winery-matured', 'matured on the lees for x months', 'selection' and similar terms; mentions of 'old vines', 'old vineyards', 'century-old vineyards', 'pre-phylloxera vineyards', 'high altitude vineyards', 'estate-owned vineyards' and similar; and mentions of 'vintage', 'fermented on the lees' and similar mentions; use of logos; reference to the sensory qualities of the wine; reference to the soil characteristics of the vineyard; and the scope of map legends on informative back labels. Finally, the document includes references to the use of the guarantee seals and back labels and provides criteria for measuring the size ratio required on labels between the brand name and the optional mentions of the word 'RIOJA'.

Collective bargaining agreement of Control Board personnel

It was unanimously agreed to sign a Collective Bargaining Agreement to govern labour relations in the Control Board in 2020, which would entail the inclusion in the text of an automatic reporting system and a review of remuneration equivalent to the variation in the CPI as of December 2019 plus one percentage point, with the lower limit being 1% and the upper limit 1.5%, to which an extension would be added during the second half of June concerning the continuous working day of part-time workers.

A major milestone in Rioja

The DOCa Rioja has 84 viñedos singulares belonging to 50 wineries

On 30 July, the Ministry of Agriculture, Fisheries and Food published in the Spanish Official Gazette its recognition of the first 84 grape-growing areas known as ‘viñedos singulares’ within the DOCa Rioja. This is the first time that this new quality mention has been officially recognised and, according to the Ministry, it “highlights the excellent wines of this Designation and represents an incontrovertible milestone for the Rioja Control Board and the three autonomous regions involved, La Rioja, the Basque Country, and Navarre.” This recognition fulfils one of the sector’s ambitions to improve and expand the Rioja wine market based on quality.”

These 84 viñedos singulares, which cover a total area of around 155 hectares, are very special vineyards within the 65,000 hectares of DOCa Rioja. The main requirements for a particular vineyard to be known as ‘singular’ are as follows: that it refers to a clearly demarcated vineyard whose vines are at least 35 years old; that harvesting is done manually; that growing practices are geared towards sustainability and care for the environment; that the maximum permitted production quota does not exceed 5,000 kg/ha for red grapes and 6,922 kg/ha for white varieties, with a grape-to-wine ratio no higher than 65%; and that all the grapes of a particular wine come from that named vineyard.

It is also worth pointing out that wines bearing the term Viñedo Singular on the label must be assessed twice: just after they have been made, and just

REGULATIONS ON 'VIÑEDOS SINGULARES'

Act 6/2015 on Protected Designations of Origin and Protected Geographical Indications of supra-regional territorial scope and the Royal Decree that implements it set out the procedures for recognising smaller geographical units within the area of the Designation that produce outstanding wines. It was in 2017 that the DOCa Rioja Control Board Plenary introduced the classifications of *Vino de Zona*, *Vino de Municipio* and *Viñedo Singular*, changing the Designation Specifications in order to do so. By the end of 2018, the Designations wineries and grape growers had submitted more than 80 applications for *viñedo singular* classification to the Ministry of Agriculture, Fisheries and Food. During this time, the Ministry has worked in close collaboration with the DOCa Rioja Control Board in order to authorise this project of excellence within the shortest possible time.

before they are put on sale, this being the time when they need to obtain a rating of 'excellent' in the sensory tests conducted by the Control Board. The back labels that endorse these wines, apart from certifying all these factors, include the words *Viñedo Singular* which lets consumers know that all the characteristics described on the label have been certified by the Control Board.

Official recognition by Minister Planas at the Control Board

The DOCa Rioja welcomed Luis Planas, the Minister of Agriculture, Fisheries and Food, on an official visit during which he chaired a ceremony held at the Control Board headquarters on 10 October to confirm in person the Ministry's official recognition of the first 50 wineries that applied for the 'Viñedos Singulares' certificate. The visit underlined the importance of this new mention promoted by the DOCa Rioja Control Board, which defines a path that other designations may well be interested in following.

Following the official approval of the first 84 applications for *viñedos singulares* in Rioja last July, and coinciding with the Control Board's endorsement and the subsequent release on the market of the first *Viñedo Singular* wines, the Minister wanted to deliver this recognition in person to the 50 wineries behind these wines and congratulate them for their "tremendous efforts." Planas highlighted the commitment to quality and authenticity granted to Rioja wines with the very highest levels of excellence and recognition, "furthering the very finest of our family traditions." He also thanked "all the professionals whose constant hard work and efforts have made it possible for this Designation of Origin, the oldest in Spain (dating from

1925) and the first to achieve the *Calificada* category (1991) to continue being synonymous with the highest quality standards."

The president of the DOCa Rioja, Fernando Salamero, thanked the Minister for his visit and highlighted the Wine Regions consistent response to the concerns and expectations of consumers, trade, influencers and producers. "Rioja continues to take major steps forward and demonstrate that it is a dynamic and vibrant brand that adapts to the times. It is also a rigorous self-regulator when it comes to traceability, increasingly offering improved and more reliable information on the specific origin of wines on the label, highlighting the authenticity of their roots." Salamero looked back on Rioja's track record as an exemplary pioneer "that today is again consolidating its bold and trailblazing approach with these *Viñedo Singular* wines, the number of which will continue to grow as, in addition to the 84 wines already approved, there are another twenty-two new applicants in the evaluation phase."

This ceremony culminated a process that began in mid-2017 when it was agreed to add to the DOCa Rioja Designation Specifications the possibility of identifying a more specific origin for certain wines made from one or several plots with specific and uniform agricultural, geological and climatic characteristics that distinguish them from others in their immediate area, obtaining wines with unique traits and features. This combined specific elements of qualitative and geographical traceability that have enriched the already outstanding range of blended wines on which Rioja's reputation is founded.

The representatives of the different wine sector associations who sit on the Standing Committee of the Control Board had the chance to meet with the Minister and his team, during which they exchanged views and voiced their opinions on the current situation of the wine industry.

Representatives of the DOCa Rioja meet with the Minister of Agriculture, Fisheries and Food to study the current situation of the wine industry

In response to the invitation from the president of the Control Board, Fernando Salamero, the Minister of Agriculture, Fisheries and Food, Luis Planas, along with a delegation from the Ministry, held a meeting on 4 February at the DOCa Rioja Control Board's headquarters with the organisation's senior representatives.

The Minister highlighted "the indispensable added value of a Designations of Origin that is upheld by all the operators within it." In terms of the region, he emphasised "the importance of the Rioja name, which is evident wherever you travel in the world, and engenders a sense of pride when you can include this product in your presentation package." Rioja wines, according to the Minister, "convey the sense of a strong, unique and united Rioja, notwithstanding the abundance and diversity that you find the length and breadth of the region, which constitutes the most important cornerstone of its future success."

After the meeting, the representatives of the different member associations on the Control Board's Standing Committee had the chance to meet the Minister and his team, exchange views and voice their opinions on the current situation of the wine industry. The meeting also served to verify the reputation that Rioja enjoys worldwide, to get more detailed information on the strategic decisions that will make up the road map for the coming years, and to discuss the challenges that the region will

be facing in the future, in relation to which the Minister offered his full cooperation in helping to overcome them.

Visit of the United Kingdom's ambassador to Spain

The United Kingdom's ambassador to Spain, Simon Manley, together with the Honorary Consul, Derek Doyle and James Birkett, the Political Adviser at the British Embassy in Madrid, met at the Control Board headquarters with its president, Fernando Salamero, the general director, Jose Luis Lapuente, and the same committee of experts with whom they met one year ago to examine the trade situation between the two markets during the Brexit process.

Other participants at the meeting included Begoña Martínez Arregui, the regional minister of the President's Office, Institutional Relations and Foreign Activities, and Iñigo Nagore, the regional minister of Agriculture, Livestock and Environment.

Champagne visits Rioja

The Rioja Control Board hosted a visit by a delegation from Champagne, organised by the region's Wine Interprofessional Committee.

The group, which composed around 30 people, travelled to Rioja to take part in a full-day working meeting. The president of the Control Board, Fernando Salamero, general director, José Luis Lapuente, and a number of wine sector representatives had the chance to exchange views and discuss the region's track record and lines of work, updating their French counterparts on everything

Carlos Hernando Loza wins the 2019 TFG Oenology Award

that is going on in the oldest Designation of Origin in Spain.

The delegation thus repaid the visit made a few years ago by some of the Rioja Control Board members in a demonstration of their mutual interest to keep abreast of legislative, technical and promotional issues.

Salamero rated the visit as “an excellent opportunity to keep in contact and learn from each other, showcasing the good work of these two leading regions and bonding more closely with a region that shares many of Rioja’s values, such as respect for origin and tradition and a continued commitment to the maximum quality of our wines which are recognised and admired worldwide.”

Rioja regularly attends the same forums as Champagne, an example being the Wine Origins Alliance (now known as origins.wine), as well as having similar concerns and objectives in the wine world.

Rioja flies high

Iberia Airlines has signed an agreement with the Control

Board whereby the wineries that form part of the DOCa Rioja will benefit from preferential prices. The agreement signed by the two organisations gives Rioja wineries access to a system of codes that offer special rates to Iberia’s corporate clients.

Training sessions for journalists on the DOCa Rioja

The Control Board and the Press Association of La Rioja have planned a series of training sessions aimed at professional journalists in Rioja. The initiative is part of a broader collaboration project being promoted by the two organisations that aims to give journalists much more extensive and accurate knowledge of the different aspects related to the wine world in general and the DOCa Rioja in particular. The first session, given by the Control Board general director, José Luis Lapuente, took place on 18 December last year at the journalist association’s headquarters and covered the subject of Rioja’s new geographical indications.

Carlos Hernando Loza wins the 2019 TFG Oenology Award

Carlos Hernando Loza, a graduate in Oenology from the University of La Rioja (UR), won the award for the best Dissertation in Oenology for 2019, for his study and comparison of the new method for preventing and treating powdery mildew in vines.

The project consisted of a study of the effect of treating grapes with a biological powdery-mildew treatment on the fermentation process and the quality of both the grapes and the wine.

The DOCa Rioja Control Board awarded Carlos Hernando a three-month scholarship that will give him

a deeper insight into how the Control Board operates as well as expanding his oenological knowledge.

Rioja on the Designations of Origin governing body

The Twenty-fourth General Assembly of the CECRV (Spanish Conference of Wine Control Boards), held on 25 October 2019 in Ribeira Sacra, brought together more than 60 representatives of 37 wine designations of origin. The main topic was the election of the senior representatives of the organisation for the next four years, given that the previous mandate, which started on 23 October 2015, was drawing to a close. Rioja will continue to hold the position of first Vice-president of the CECRV for the next four years.

Institutional collaboration

- Giving a presentation of the DOCa Rioja for students at the OIV Masters degree course offered by the University of La Rioja.
- Participating in the Masters degree course in Integral Packaging Design for the Food and Wine Industry offered by La Rioja Design School
- Participating in the WineTech project Advisory Committee.
- Collaborating with the Spanish Conference of Wine Control Boards (CECRV) in their relations with the EFW (European Federation of Origin Wines), of which it is a member.
- Representing the EFW as experts on the subject of the protection of Geographical Indications and Designations of Origin in the European Union and their commercial benefits, at the conference organized by the Directorate General for Agriculture in Mexico.
- Representing the DOCa Rioja Control Board at an international lobby group advocating origin and geographical names.
- Representing the Spanish Conference of Wine Control Boards at the Board of Directors of the Wine Technology Platform.
- Representation of the DOCa Rioja Control Board in the Great Wine Capitals Global Network.
- Participating in regional panel discussions on matters of interest to the wine industry.
- Presentations to various Riojan groups (Rioja Wine Guild, Rioja Sommeliers' Association, etc.) on matters

of interest to the wine industry.

- Presentation to the Board of Directors of the DCOOP (Association of Agrifood Cooperatives) to give a general overview of the DOCa Rioja.
- Participating in the Masters Degree in Viticulture, Oenology and Business Management offered by the University of La Rioja.
- Participating in the Masters degree in Sommellerie offered by the Basque Culinary Center.
- Participating in the La Rioja Research and Development Council to supervise the La Rioja Smart Specialisation Strategy (RIS3) based on knowledge and innovation.
- Participating in the summer course of the Mediterranean Agronomic Institute of Saragossa on Spanish food culture, Mediterranean diet and agrifood industry, offering a general overview of the *Denominación de Origen Calificada Rioja*.
- Representation of the Spanish Conference of Wine Control Boards with the rest of the Executive Board at the seminar with the EU Directorate General for Agriculture on international agreements, and subsequent networking with Euro MPs in a session titled 'The Future of European Designations of Origin'.
- Informative meeting and training session with the regional media on the subject of topical wine-related issues.

Budget funding by the industry

Funding for Control Board activities comes from contributions made by registered grape growers and wineries, based on the following:

- **Compulsory fees on the value of certified production.** These are based on actual grape production from the previous year's harvest.
- **Compulsory fees for protected products.** These are based on actual sales of each type of wine (Generic, Crianza, Reserva and Gran Reserva) in the previous year.
- **Compulsory fees for documented certified value.**
- **Compulsory fees for back labels and seals.** These are based on the back labels and seals issued to the wineries which sell the wine.

The basic expenditure and investment budget is established considering the goals of the activities and services that the Board provides for its members. In order to calculate the ordinary budget based on the income from protected production, the figures were taken from the approved volume of the previous year's grape harvest and an estimated average price per kg of protected grapes in the wine region, calculated as 0.90 €/kg. The basis for calculating the income budgeted for sales is the statistics on the number of litres sold in the previous year and the average prices per litre according to operators' monthly reported statistics for each of the categories of wine sold for export: €3.25/litre for Generic wine, €4.43/l for Crianza, €6.50/l for Reserva, and €12.37/l for Gran Reserva.

This is used as the basis to apply the participations for each sector (growers and wineries) and the resulting percentages are applied to determine the compulsory fees for members.

Also, fees are applied on the documented value and the value assigned to guarantee and control documents, back labels and/or seals, both contributions being main-

EXPENDITURE BUDGET FOR 2019	
PERSONNEL EXPENDITURE	
Permanent personnel costs	1,690,521.99
Temporary personnel costs	688,363.62

tained without variation over previous years other than those due to the amounts on the documents submitted. The compulsory fee on guarantee marks is an amount related to the number of documents that each winery received the previous year and this is divided into twelve monthly instalments.

CMO Grants

Grants were received for promotional campaigns co-financed with CMO funds totalling €2,583,412.16, of which €1,293,850.19 came from the 2019 CMO contribution, which ended 31 May 2019, which had already been received, and the rest, €1,289,561.97, is in the following CMO year ending on 30 April 2020 and is awaiting collection. In addition, a grant of €20,563.66 was received from the Navarre Rural Development Programme and another grant of €3,500 was given by the La Rioja Economic Development Agency.

€10M Extraordinary budget for promotion

The Control Board Plenary approved an Extraordinary Budget of €9,994,952.00 for the Marketing and Promotion Plan. This Extraordinary Budget, together with the amount approved in the Ordinary Budget for communication, represents a significant sum to promote Rioja wine on the various markets and is mainly used in advertising and promotion on the domestic and foreign markets. The actions to be undertaken in the area of marketing and communication are studied by a group of experts selected from among the associations represented in the Control Board, as well as the Board's own staff. The group of experts assesses plans, actions and budgets for each country

and submits them to the Plenary for approval. The plans include advertising and promotional actions mainly in the United States, Germany, the United Kingdom, China, Mexico, Switzerland, Russia, Ireland and Canada. Part of the budget was also assigned to advertising and promotion in the domestic market, with TV, radio, social media and point-of-sale communication campaigns.

Basic expenditure budget of €6.5M

The basic budget for expenses and investments was defined taking into account the goals, actions and services that the Board provides for its members. The Budget includes personnel costs based on the Collective Agreement, maintaining control activities. Operating costs were similar, adapting items to the Consumer Price Index and to the requirements of activities. In the area of Communication and Promotion, there was a continuance of activities, research into wine tourism, tasting courses and on-trade and Internet dissemination.

The collection of POS samples both in Spain and abroad continued. An additional item was the investment in the implementation of the Rioja Trustseal holograph on labels and seals.

RIOJA

... is diverse

The word Rioja conjures up a diversity of climates, altitudes, valleys, municipalities, landscapes, grape varieties, colours and styles of wine. The Rioja Designation of Origin extends across 144 municipalities, with more than 65,000 hectares, 600 large and small wineries and 15,000 grape growers comprising a melting pot that is difficult to compare with other wine regions.

ADMINISTRATION SERVICE

The Administration Service is responsible for the entire economic and administrative organisation of the Control Board (Plenary, General Directorate and other departments), providing it with the necessary information and means to carry its functions. This department produces and supervises budgets, manages the accounting and cash flow, and manages the various types of compulsory fees from grape growers and wineries, which constitute the Board's earnings.

The Administration Service also controls expenditure and collects information from the Control department to manage and update vineyard and winery records. It stocks and issues guarantee labels and seals, and supports the wine classification process.

Strict compliance with the Articles of the *Denominación de Origen Calificada Rioja* requires controlling and issuing a considerable number of documents each year, a task carried out by the Board Administration Service. The most important documents are export documents, authorisations for transporting wines between registered wineries, processing vintage control forms for the different types and categories of wines and issuing wineries with the back labels and seals that guarantee the origin, quality, vintage and category of wines protected by the Designation of Origin.

DOCUMENT MANAGEMENT

Export documents

In 2019, a total of 364 certificates of origin were issued for exports to foreign countries. Authenticating the wine's origin in the accompanying documents is not required for bottled wine, as each bottle bears its own individual certificate.

Transfer permits

The total volume of wine transferred between registered wineries in 2019 amounted to 244 million litres. A total of 3,502 permits were issued for transfers of protected wines.

Vintage control forms

The Control Board Administration Service issued a total of 729 vintage control forms in 2019 for the various types and categories of wine.

Back labels and Seals

A total of 12,290 "documents for back labelling/sealing Rioja wines, and other expeditions exempt from requiring commercial documents" (which have to be filled in by both growers wine sellers) were issued and recorded for 2019.

Also, the 5,803 deliveries of back labels and seals made to registered bottlers of Rioja wine totalled 347,315,588 guarantee documents. Of these, 613,882 were normal paper back labels, 4,071,209 were self-adhesive back labels, 53,306,400 were normal paper seals and 289,324,097 were self-adhesive seals. In addition to these deliveries, the relevant printers delivery documents were drawn up and registered. These totalled 2,841 forms and 587 return documents.

As in previous years, the use of seals rose. While in 2000 seals represented 78% of guarantee documents, this figure rose to 99% in 2019. This is due to the increasing use by wineries of back labels that contain information about the wine. The use of guarantee documents printed on self-adhesive rather than normal paper has also risen from 22% in 2007 to 84% in 2019.

LEGAL DEPARTMENT

The main functions of the Control Board Legal Department are processing files, providing legal support for the Control department, defending the DO in court and providing advice.

The Legal Department is a crosscutting department whose activities are mainly aimed at processing the administrative reports processed within the Control Board, as well as to give the Control department the necessary legal support. Rioja is one of the few Control Boards to have a Legal Department, which gives an idea of the level of development that the Designation has achieved. The Legal Department has been part of its organisational structure since 1986, it was included in the Board Regulations in 1991 and Order APM/544/2017 of 5 June 2017 included it in the Board Articles of Incorporation, which are still in effect.

Labels

A total of 1321 new labels were notified, of which 361 correspond to new brands and 960 to design changes in previously authorised labels.

In addition to processing the aforementioned administrative reports, the Control Board Legal Department closely cooperated with the Food Information and Control Agency (AICA) in the drafting of all those reports which are required to process disciplinary proceedings. In 2018 they both signed an Agreement regarding disciplinary proceedings for violations under the Law of Designations of Origin and Protected Geographical Indications of supra-regional territorial scope, approved by Resolution of 10 October 2018, of the Food Information and Control Agency, OA, and published in the Spanish Official Gazette on 19 October 2018.

The Legal Department defends the Designation before Public Administrations and Law Courts and also works on the defence of the Rioja brand, at the national, European and international levels, before the different Industrial Property Offices with actions in both the administrative and judicial spheres. It also draws up legal reports on various issues affecting the Designation and the Control Board; provides information and advice to both persons registered with the Control Board and third parties; and, thirdly, deals with requests for documentation from various legal bodies (particularly those of a civil nature) regarding vineyards protected by the Designation that are the subject of complaints by individuals.

Finally, the Legal Department maintains a permanently updated legal documentation service, which has been available to Control Board website users since 2001. Available files include the Spanish wine legislation on vineyards and quality wines applicable to both the DOCa Rioja and the other wine Designations of Origin, as well as the regulations enacted by the Autonomous Communities of La Rioja, the Basque Country and Navarre, and

the Official Circular Letters issued by the Control Board with regulatory content since 1968 and indexed by subject and chronologically.

Regulation of new mentions to make Rioja labelling more dynamic

With the aim of enriching the labels of wines protected by the Designation and making it more dynamic in line with the demands of the sector, in 2019, the Board regulated the use of new mentions, among which the following should be highlighted: 'Madurado en bodega' (winery-matured); 'Selección Especial' (special selection); 'Viñas Viejas' (old vines); 'Viñedos centenarios' (century-old vineyards); 'Viñedos de Altura' (high altitude vineyards); 'Viñedos propios' (estate-owned/own vineyards); 'Fermentado en hormigón' (concrete fermented) and 'Macerado en tinaja de barro' (macerated in clay/earthenware jars). The standards approved by the Council define

the scope of these texts on the back labels, as well as the possibility of mentioning soil and sensory characteristics.

The Control Board Plenary agreed on two occasions during 2019 to modify the 'Minimum requirements to be complied with by the labels of wines of the *Denominación de Origen Calificada Rioja*', in order to regulate these new mentions based on the work entrusted to the Regulations Committee, of which the Legal Department counsel is secretary. This Committee has undertaken to carry out six-monthly reviews to include or develop of new mentions, a clear indication of the dynamism sought in this area.

New 'Crianza' ageing periods for whites and rosés

The Control Board Plenary also agreed in 2019 to modify the requirements for the use of the traditional term 'Crianza' for white and rosé wines, which is now set at a minimum of 18 months. The wines will continue with the traditional mixed ageing system in oak barrels of approximately 225 litres capacity, continuously and without interruption for no less than six months, followed by complementary ageing in the bottle. These changes to the DOCa Rioja Designation Specifications responds to the sector's interest in producing and marketing white and rosé wines, enabling quicker market releases, while helping set apart the Reserva category and matching the definition in Spanish regulations to ensure compliance with the applicable legal framework.

The first Viñedos Singulares

The Designation reached a new milestone in 2019 when the Ministry of Agriculture, Fisheries and Food published Order APA/816/2019 of 28 June in the Spanish Official Gazette, which recognised the first 84 viñedos singulares (vineyards with unique characteristics) within the *Denominación de Origen Calificada Rioja*. This was the culmination of a process in which 50 vineyard owners promoted up to 84 projects representing 155 hectares, which had its starting point in mid-2017, when it was decided to include in the Rioja Designation Specifications the possibility of identifying a more specific origin for certain wines, which has the value of being certified by the Control Board. After its official approval, the Minister of Agriculture, Fisheries and Food gave these first fifty operators of viñedos singulares a certificate of recognition at the Control Board headquarters.

In addition, the Control Board plenary approved two

amendments to the Designation Specifications in 2019, one to define the demarcation of the *viñedos singulares* and the other to reinforce the mandatory nature of labelling requirements.

Processing of files

In 2019, the department processed a total of 1734 administrative reports arising from actions of other departments of the Control Board. Non-disciplinary proceedings arise from notifications of new label designs, registration of productive vineyards after they are authorised by the Departments or Regional Ministries of Agriculture of the three Autonomous Communities in which the wine region is located, incidents observed on the field by the Empowered Overseers Service with respect to vineyards in their second year (discrepancies related to how many vines can be held, grape varieties grown, plantation densities, location, etc.), allegations related to the wine classification process, claims on the amount of protected grapes, etc.

In the case of disciplinary proceedings, reports were forwarded to the Food Information and Control Agency for labelling violations, omissions and errors in the guarantee certificate usage statement, volume discrepancies, pruning- and irrigation-related violations, non-compliance with requirements regarding experimental growing

practices and planting unauthorised grape varieties. A total of 135,540.84 euros in fines were collected for the National Treasury Department in 2019. These sums are from proceedings instituted on or before 2019 and closed this year.

Favourable judgements

Within the legal sphere, the Control Board received 31 court rulings from the Courts of Administrative Litigation No. 1 and 2 of La Rioja, referring to the same sequence of events that took place during the 2016 harvest. All the arguments put forward by the applicants in both the administrative and the contentious proceedings were rejected.

Furthermore, various courts have requested reports and certifications from the Control Board in relation to disputes involving vineyards, planting rights and authorisations of registered vineyards or assets belonging to wineries.

MARKETING & COMMUNICATION DEPARTMENT

The Marketing & Communication Department is in charge of developing the strategy, planning and management of public relations, communication and promotional activities carried out by the Control Board, in accordance with the budgets allocated by the Plenary. Likewise, the department is in charge of communications for all Control Board areas, which are executed in accordance with an annual plan that is adapted to the Designation's priority interests at any given time. It is also responsible for the development of two global training and wine tourism projects, as well as for planning and coordinating market and image polls with specialist companies when required by any of the Control Board's areas for decision-making purposes. .

With regard to promotional campaigns, the Marketing & Communications Department is responsible for proposing initiatives, in terms of both advertising and public relations (its own events, trade fairs, seminars, tasting courses, etc.), which help to improve the level of awareness and raise the perception of the Rioja brand and its protected wines among consumers.

As an important part of the Control Board's strategy, the Marketing & Communications department manages relations with the media. The department schedules and implements informative campaigns, issuing more than one hundred communiques, reports and special contributions every year, and deals on an individual basis with the numerous requests for information received from the media and trade journalists, in addition to designing and attending the press missions organised by the Board.

The department is also in charge of the Board's various publications (the CONSEJO newsletter, the annual report of activities, the website and various promotional and informative materials, which are re-edited and re-printed regularly due to high demand), as well as online support for disseminating information targeted both at trade professionals and final consumers: constantly updating the institutional website www.riojawine.com the newsletter, Riojawine TV, etc.

Other activities include managing the Rioja Wine Information Office, which attends to the many people, both Spanish and foreign, who visit the Board's headquarters or contact it by phone or email.

The Control Board's Marketing & Communication department currently has a team of six people under the direction of Íñigo Tapiador. In addition, eight communications agencies in as many countries manage the promotion of Rioja in each country under the Department's coordination. In order to measure and evaluate the effectiveness and results of the promotional campaigns in the different countries, the Control Board hires the services of the specialist external consultancy firm Wine Intelligence.

'Saber Quién Eres' looks to the future

Rejuvenating and changing of perception of the image of Rioja, the new strategy aimed at younger consumers

In Spain, Rioja enjoys remarkable brand recognition and undisputed market leadership. However, various market studies indicate that this reputation is less well established among the younger generation. That is why a new strategy was launched in 2019 to rejuvenate and change the perception of Rioja among consumers aged 30 to 45. The tone and visual line of the 'Saber Quién Eres' campaign was refreshed, adapting it to the look, language and communication channels closest to this audience, which represents the future of Rioja sales.

In this sense, actions were carried out to capture current trends, such as growing daytime consumption and the boom in occasions such as aperitifs, early evening drinks or weekend festivals and markets. In addition, advertising messages were targeted strongly at digital channels and social media.

New team members

The Control Board's Marketing & Communication department brought two new members on board in early 2019: Íñigo Tapiador Larrañaga, as manager and Ana López-Cano Lamarain as project manager.

Appearance of the first 'Viñedo Singular' wines

In addition to modernising its image, Rioja faces the constant challenge of transmitting its know-how and strengthening the credibility and authority of its wine proposition. The opinion of industry critics and professionals is fundamental in this respect and, for this reason, a programme of specific communication actions was launched in 2019 for this audience, using the presentation of wines from new geographical indications as the main argument. The launch of the first 'Viñedo Singular' wines

was an undeniable lure for two presentations held in Madrid and Seville, with an attractive staging inspired by the typical markets of Riojas.

In international markets such as the United Kingdom or Switzerland, where Rioja's presence was consolidated many years ago and where the Region's reputation among consumers is very significant, the same objectives as in Spain were applied (improving perception, rejuvenating and 'premiumising' the brand). All the actions carried out in 2019 were in line with this approach, with a large num-

ber of campaigns aimed at consumers and an outstanding presence of the Rioja brand at sponsorships, festivals and events.

Some markets, such as Russia and China, are becoming more and more important for Rioja, but brand awareness is still low among consumers in these countries, which is why promotional activities are mostly aimed at wine sector professionals and the trade media. In these markets, the challenge is to 'educate' professionals and opinion leaders so they can recommend Rioja and transmit its message to consumers, although there are also some activities selectively organised for them along with point-of-sale activities to establish partnerships with the

main retail chains.

In short, in 2019 the Control Board earmarked almost 11 million euros for promotional campaigns in 13 key markets for Rioja sales: the United Kingdom, Germany, the United States, Switzerland, Russia, China, Canada, Mexico, Ireland, Denmark, the Netherlands and Japan; not forgetting that Spain continues to be Rioja's main market, with more than 60% of total sales.

Wine Tourism Plan and Rioja Wine Academy, strategic global projects

In addition to the specific campaigns in 13 international markets, in 2019, the Control Board rolled out two major strategic global projects, the Wine Tourism Plan and the launch of the Rioja Wine Academy.

The Wine Tourism Plan continues to grow and help position Rioja as a clear leader in quality tourism among Spanish wine regions, as shown by the almost 860,000 visits to Rioja wineries recorded in the second Wine Tourism Monitor. The programme carried out by the Control Board in 2019 included specific training sessions on marketing applied to sales and customer loyalty, as well as an ambitious business tourism plan. Similarly, the Control Board headquarters hosted a meeting with the network of the main regional incoming travel agencies.

This year was also the year of the development of the strategy and preparation of the 'Rioja Wine Academy' platform, launched in February 2020. This project is based on the enormous demand generated by the 'Rioja Educators' programme, which was launched in 2016 and has enabled the Control Board to certify close to one hundred trainers who spread knowledge about Rioja in more than 20 countries. Apart from teaching the trainers, the course aroused considerable interest among other industry professionals who market Rioja wines, as well as among the people involved in promoting wine tourism at the different wineries. There was also a growing number of queries from wine enthusiasts, so the idea was to respond to this whole demand that could not be met solely through the Educators programme.

PROMOTIONAL ACTIVITIES IN SPAIN

Rioja presents its new quality indications in Bilbao

Rioja presented the updated concept of its labels, “one of the biggest projects we have undertaken in recent years,” according to the president of the DOCa Rioja, Fernando Salamero, at the New Geographical Indications show held on 1 July at the Azkuna Zentroa in Bilbao and attended by more than 250 trade professionals. Around fifty winemakers submitted a total of 75 references to the DOCa Rioja in line with the new regulations which the Designation implemented in 2017 by introducing a traceability system for ‘Vinos de Municipio’ identical to that of ‘Vinos de Zona’ launched in 1998, which allows the names of the municipalities to appear on the label. These new indications, which include ‘Viñedo Singular’ wines, increase the visibility of smaller geographical units, defining and certifying the specific origin of the wines on the label itself. “Immersed in a process of continuous improvement,” concluded Salamero, “Rioja continues to enrich its wine offerings, proving to be a vibrant and dynamic brand that adapts to the passage of time, always seeking consumer satisfaction without ever losing the authenticity of its roots, which truly makes us unique.”

Presentation of the new Rioja geographical indications in its own ‘Plaza Mayor’ in Madrid and Seville

Under the name ‘Plaza Mayor de Rioja’, the Control Board presented its new Geographical Indications in Madrid and Seville with the aim of highlighting the origin, terroir and values of this commitment to smaller geographical entities and to recognise the diversity and contribution to excellence of Rioja wines. Both the event held at the Lázaro Galdiano Museum in Madrid on 30 September and the one held at the Carriage Museum in Seville on 25 November were presented by Almudena Alberca, the first female Master of Wine in Spain, accom-

panied by Kike Sola, a former footballer and wine lover.

Both presentations showcased the current portfolio of the Designation in a new and original way with around one hundred wine and food industry professionals, tasting 60 'Vinos de Zona' and 'Vinos de Municipio' as well as the much-anticipated first thirteen 'Viñedos Singulares'. In addition to a speech by Pablo Franco, director of the

Control Board's Control Department, a delegation of winemakers from the region discussed these new milestones in the sector (Juan Carlos Sancha, Paco Hurtado de Amézaga and Gorka Etxebarria in Madrid; Carlos Piserra, Carlos San Pedro and Chema Pangua in Seville).

A book and a Rioja

Leyre Chordá, a student at the La Rioja School of Design, was the winner of the design competition for the label and poster 'A book and a Rioja, the pleasure of culture,' an initiative to celebrate 'World Book Day' in Rioja. This action is supported by the booksellers of La Rioja, the Control Board, and the La Rioja Economic Development Agency.

Rioja takes part in Sur Wines & Gourmet in Malaga and FEVINO in Ferrol

The DOCa Rioja Control Board took part in the FEVINO trade fair in Ferrol and in the Sur Wines & Gourmet fair in Malaga, organized by the food supplement of newspaper Diario SUR, Málaga en la Mesa, and Grupo La Reserva. At both events the Control Board discussed the new wine labelling situation in depth. Pablo Franco, technical director of the Control Board, gave a master-class through a guided tasting session, providing details of the new mentions that, since 2017, have rounded off and enriched the traditional Rioja portfolio

An autumn full of 'Rioja experiences'

As new generations are introduced to the world of wine, the type of consumer is evolving and new consumer trends are being created, which put an increasing emphasis not only on the origin and quality of the products themselves but also on the growing interest of these new audiences in the search for memorable experiences. Spain, the main market for Rioja wine, is no stranger to this changing scenario, which is why the Designation has launched an ambitious communication plan that speaks directly to these new consumers through disruptive and experiential proposals. During the last four months of the year differ-

Guided DOCa tasting
at FEVINO

A group of professionals tastes 'Vinos de Municipio' at the official Rioja booth in FEVINO

ent actions were planned within the framework of this strategy, designed in partnership with Mediterránea de Medios. With a contemporary language and visual style, a travelling Rioja wine bar with a terrace and photocall visited five of the main 'weekend markets' in the two main Spanish cities: the famous Design Market, Motor Market and Brunch in the City, which attracted almost 90,000 visitors.

'Saber Quién Eres' makes the jump to the windows

The advertising campaign 'Saber Quién Eres' has gone a step further, jumping from the pages of newspapers and magazines or the television itself to the shop windows of some thirty shops in trendy neighbourhoods of Madrid and Barcelona. This innovative window dressing action has become a new wave of advertising with a qualitative impact, through which passers-by are surprised by 3D ads of Rioja in the most unexpected spaces such as clothing stores, bookstores or hairdressers. The campaign has also been extended to regular wine points of sale with posters, brand recognition elements and gifts that make the Rioja brand and the message 'Saber Quién Eres' stand out in more than 400 food and hospitality establishments in Madrid, Barcelona, Castile and Galicia, encouraging people to buy.

Urban markets with Rioja participation

INTERNATIONAL PROMOTIONAL ACTIVITIES

Success of the 'Rioja 10×10' in London

More than 500 wine and food lovers gathered in an iconic building on London's South Bank to taste a representation of Rioja wines at the fifth edition of the 'Rioja 10×10' event. The 100 wines were chosen by a blind tasting of almost 400 samples by a select jury of twelve wine professionals led by Tim Atkin MW and Sarah Jane Evans MW, who divided the tasting session into the following categories: unoaked whites, oaked whites, rosados, Crian-

A great welcome for Rioja's new products at Prowein

For the fifth year running, the Control Board took part with a multi-experience stand at Prowein, the wine industry's leading international fair held in Düsseldorf in March. The Control Board's aim was to add value to the outstanding representation of almost 170 Rioja wineries attending the fair. In the 'Masterclass Arena' area, dedicated to training, 600 trade professionals interested in the latest Rioja wines attended twelve seminars given by the renowned influencers Tim Atkin, David Schwarzwälder, Yvonne Heistermann, Peer F. Holm, Marco Antonio Aguado and Jürgen Mathäß.

za, Reserva (£10–£14.99), Reserva (£15+), Gran Reserva, generic premium wines (£15+) and non-Tempranillo reds, plus a final selection chosen by the panel.

'Rioja Recognises' awards for its top partners in the United Kingdom

The Control Board recognised the work of Fiona Beckett, Richard Bigg, Dawn Mannis and Pierre Mansour, four great ambassadors of Rioja wine in the British market, at the fifth edition of 'Rioja Recognises'. This gala event celebrates the contributions of key wine sector professionals to the development of Rioja in a market that is still its main consumer country, to which almost 200 Rioja wineries currently export their wines. The master of ceremonies was Tim Atkin MW, a well-known influencer and expert on Rioja, accompanied by the Board's marketing Director, Iñigo Tapiador, who presented the awards and thanked the professionals present for their involvement and support "to consolidate Rioja as the Spanish region of reference and the leader in this market."

Rioja wines 'refresh' the summer in Ireland and the United Kingdom

In June, the DOCa Rioja took part in 'Taste of Dublin', Ireland's premier food and drink festival, where it set up its own stand that included a wine bar and an educational area. The terrace, located in the central Iveagh Gardens in the country's capital, served more than 2,000 glasses of Rioja, offering visitors the chance to taste a wide range of wines with a selection of tapas provided by Bar Tozino, a

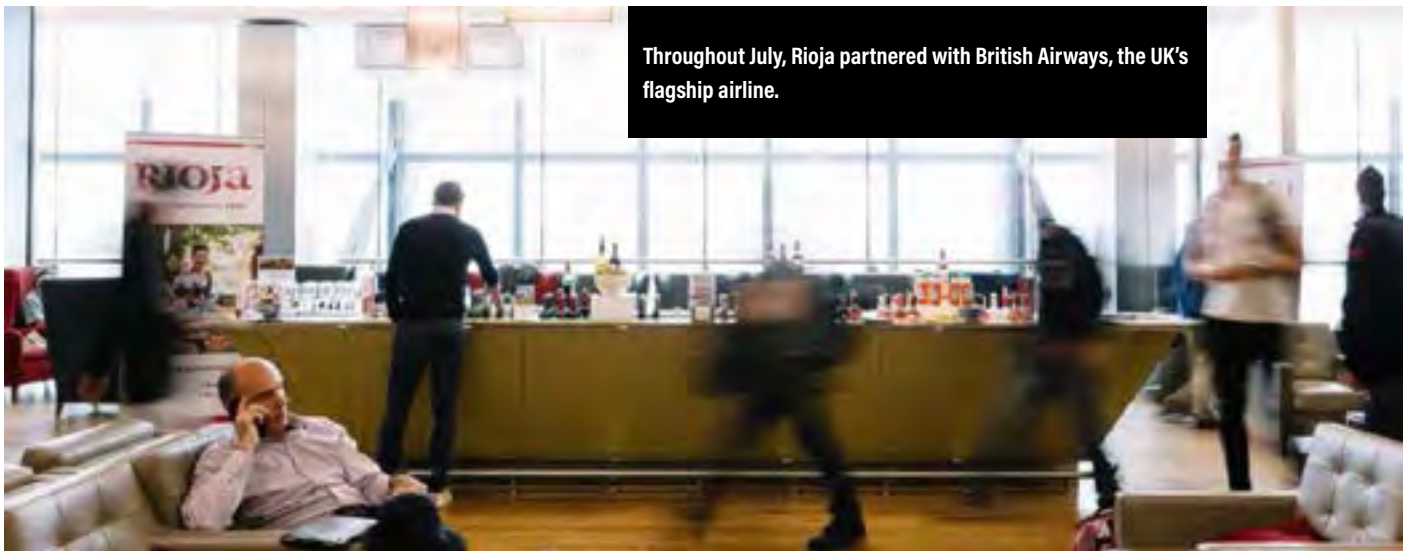

Rioja Wine Terrace at the 'Taste of Dublin' Irish food festival

well-known establishment based in Bermondsey, while a number of bands provided the atmosphere for the more than 30,000 people who attended the event. In addition, wine expert Kevin Ecock was responsible for presenting several seminars to give the audience all the latest news about Rioja. Numerous bloggers and influencers took part in the tasting sessions, using their different media to broadcast the wine pairings with the latest gourmet trends.

Rioja wines were also ubiquitous at the Wilderness Music Festival in Oxfordshire and at Port Elliot in Cor-

Throughout July, Rioja partnered with British Airways, the UK's flagship airline.

In February 2019, New York was the setting for the presentation of the new Rioja Geographical Indications and its global brand message 'Saber Quién Eres'.

nwall in July and August. Here the Rioja terrace was opened again to offer a wide variety of white, red and rosé wines. In addition, the well-known Spanish television presenter, Raúl Díaz, conducted several tasting sessions, offering an original tour of Rioja's unique character in a warm and festive atmosphere.

Throughout the month of June, Rioja worked with British Airways, the UK's leading airline, in the different VIP lounges in Terminals 3 and 5 of Heathrow Airport. Tasting areas were set up to showcase Rioja wines, offering travellers the chance to have the unique experience of enjoying first-hand all the flavours and charms of the land of a thousand wines.

'Saber Quién Eres' touches down in New York

The Control Board held one of the last presentations of its global brand message 'Saber Quién Eres' in New York in February 2019. The event was attended by renowned opinion leaders, press and wine industry professionals, who were also able to learn about the latest developments in the Designation, especially the new geographical indications. Ana Fabiano, director of the Point of Sale Programme and brand ambassador in the United States, gave a talk in which she explained these new Rioja indications, "whose aim is to highlight the unique origin of the terroir, recognise this diversity, and continue to establish quality requirements that guarantee the high standard of Rioja

wines around the world.”

The worldwide launch of ‘Saber Quién Eres’, the new brand positioning and communication strategy launched in 2018 by the Control Board, consisted of local and global advertising campaigns in the press, radio and digital media as well as various presentation events held in key markets for Rioja wines: Spain, the United Kingdom, Germany, the United States, Canada, China, Denmark, the Netherlands, Ireland, Mexico, Russia and Switzerland. Iñigo Tapiador, the Control Board’s marketing Director, explained that Saber Quién Eres is a message that connects Rioja wine with consumers in an accessible way, it is a concept that captures the most intrinsic values of Rioja: tradition, diversity and origin. With this new campaign, Rioja is showing that it is above fleeting trends and always committed to the most authentic values.”

Outstanding presence of Rioja in the Miami art scene

‘Rioja Month’ in Florida offered an ambitious calendar of actions framed within Art Basel, the prestigious art fair that brings together more than 4,000 artists and 70,000 visitors in the city of Miami during the month of December. Through exhibitions, tasting sessions and guided tastings held in hotels and more than a dozen galleries in the city, art, film and music were paired with over 50 wines from 30 Rioja wineries for the enjoyment of art lovers and collectors, mostly young people, the target audience for Rioja’s current wine promotion strategies. In addition, Rioja stood out on every street in the city’s central district with an eye-catching bus that served as a shuttle between galleries. The popular influencer Jamie Knee hosted 200 guests for a fun ‘Rioja, art and brunch’ experience on wheels.

Munich and Berlin toast with Rioja

Coordinated by the prestigious German publishing house Meininger, Munich and Berlin hosted the ‘Taste the Best - Rioja on Tour’ event which brought together consumers and wine sector professionals at one of the largest Rioja wine tasting sessions in Germany. Around one hundred Rioja wines were selected for a blind tasting by a panel of experts from Meininger magazine.

Rioja ‘on film’ in Switzerland

As part of the plan to promote Rioja on the Swiss market, the Designations fourth largest export destination, Rioja

wines were the stars of several of the most renowned gastronomic events in Switzerland in May, such as the popular 'Food Zurich' festival, which welcomed over 75,000 visitors to a department store in Jelmoli, near the central station. In addition, the FC Basel football stadium was the venue for a private presentation of the 'Rioja trade booklet' communication tool, an annual catalogue detailing the key facts about the region and Rioja wines. About a hundred professionals from the wine sector attended, including importers, buyers, restaurateurs and the main trade media. And for the third year running, Rioja wines took part in the open-air film festivals in July and August, which were attended by more than 100,000 people. On the screens set up on the banks of Lake Zurich and in the central Munster Square in Basel, the summer film sessions were paired with Rioja wines, a region that is becoming increasingly popular in the Swiss market.

Moscow hosts the fifth Rioja Wine Show

Rioja wines continue to win devotees in Russia. This was clearly demonstrated during the fifth edition of the Rioja Wine Show in Moscow, which welcomed more than 1,000 people to a luxurious shopping gallery located in front of the Kremlin. The event was directed at operators either with or without an importer, and the objective was to provide wineries with the chance to get together with some of the top trade professionals and opinion leaders to achieve greater penetration in Russia. José Luis Lapuente, the Control Board's general director, held a private meeting with influencers and bloggers at which, apart from getting a first-hand insight into the current situation of

the Designation, they were able to learn much more about the latest news with regard to legislative matters.

Rioja Week in Toronto

Under the slogan 'Rioja Revelation', a host of activities were held in different locations of the city of Toronto to promote the region and its wines in Canada. Toronto's historic event space, The Carlu, hosted a large tasting session that attracted nearly 500 attendees and featured a representation of 100 Rioja wines from 30 wineries. The day was rounded off with lectures, master classes and promotional activities aimed at consumers, wine industry professionals and the media.

Jump to the Japanese market

A group of 150 wine industry professionals, including importers, distributors, retailers, specialist journalists, wine educators, sommeliers and managers of well-known Japanese wine clubs attended the Wine Show organised by the Control Board in Tokyo with the aim of strengthening the image of Rioja wines in Japan and boosting sales in a market to which 79 Rioja wineries already export.

More than a third of the tourists who visited Rioja wineries in 2019 were foreigners

The DOCa Rioja's Wine Tourism Monitor 2019 ratified the region's sustained growth and leadership, with almost 860,000 visits to the 195 wineries that formed part of the tourist offering last year, a rise of 5.9% over the previous year.

It is worth noting the considerable increase in international tourism, which went from 30.5% of all tourism in 2018 to a significant 36.8% in 2019. This progress is especially important if we take into account the fact that foreign tourists spend more on average and make more purchases in winery shops. The figure also exceeds the national average of such important regions as Napa Valley (19.2%) and is very close to that of France (42%). According to this new monitor, the biggest source of foreign tourists to Rioja are, in order, the United States, the United Kingdom, France and Germany.

The Control Board's wine tourism development plan was rolled out throughout the year by facilitating meetings between the sector and specialist tourism-related agencies and training plans for the wineries.

Manual to promote Rioja wine to business visitors

The DOCa Rioja has developed a new Manual to promote business tourism. It was presented during a meeting with wineries and specialists in business travel and aims to facilitate the marketing of business tourism by promoting incentives, conferences, meetings and trade fairs in the Designations wineries.

Some 55 wineries and 12 business travel experts and event organisers from the corporate sector took part in the EnoMICE workshop and meeting. The aim of this meeting was to continue facilitating the marketing of the Designations wineries, with a particular emphasis on opening up wine tourism to the business sector.

The MICE plan was developed by the Control Board in partnerships with the expert in corporate tourism, Alicia Estrada. The initiative began last June with a training session and has been rounded off with the development of this working tool which highlights the region as a business tourism destination, as well as the facilities of the 55 wineries featured in its pages.

The manual serves to present the destination's wine tourism offering to industry professionals who, on the first familiarisation trip carried out this week and a subsequent meeting with well-known event planners in

Winery and Control Board representatives at the meeting with the region's tour operators

Barcelona, which will enable them to get to know the region, its people and its wineries at first hand.

According to the event organisers, the manual “will help the Designation to continue adapting its message and highlighting the unique and attractive aspects of wine tourism, such as sustainability and its alignment with the corporate social responsibility policies of many companies, both of which are essential values to continue this commitment to a high quality tourism model among organisers of business events.”.

Rioja wineries undergo training to attract more visitors

Some 70 Rioja wineries met at the headquarters of the Control Board to take part in a number of initiatives organised to help market the Designation's wine tourism product.

The two-day course focused on new technologies applied to sales, during which the wineries took note of the most modern tools. During the morning sessions on Tuesday and Wednesday, Adela Pereira, an expert in digital marketing, gave a course whose contents revolved around new technologies applied to sales, focusing on the task of attracting and retaining customers.

Meanwhile, along the lines of the workshops instigated in 2018 by the Control Board itself, a business meeting was held with some of the region's biggest incoming tour operators. The operators highlighted “the diversity offered by Rioja wineries through their many unique and complementary activities”, and congratulated them on their cooperation in making the region such a unique destination.

RIOJA

... is honest

The strict regulations that govern everything from growing and production practices to quality control and labelling guarantee the transparency of the DOPa Rioja for consumers. This reflects the frank, open and welcoming nature of the culture and the people of this land, which has contributed to consolidating Rioja as a leading wine tourism destination, with more than 800,000 visitors a year.

CONTROL DEPARTMENT

Assure quality and origin, transmitting credibility and trust

The Control department is responsible for guaranteeing the origin of the products issued by DOCa Rioja operators and for ensuring fair competition among them in accordance with the Designation Specifications and Operating Articles, as well as the Control Board's other regulations on the production and marketing of wines protected by the DOCa Rioja. The Control department which is comprised of the Empowered Overseers Service. To carry out inspections, it uses a number of overseers or inspectors authorised by the Ministry of Agriculture who are presumed to be truthful in their actions. It is currently accredited in compliance with the UNE-EN ISO/IEC 17020 standard and is in the process of implementing and accrediting the UNE-EN ISO/IEC 17065 standard.

The Control department is responsible for guaranteeing the origin of the products issued by DOCa Rioja operators and for ensuring fair competition among them in accordance with the Designation Specifications and Operating Articles, as well as the Control Board's other regulations on the production and marketing of wines protected by the DOCa Rioja. The Control department which is comprised of the Empowered Overseers Service. To carry out inspections, it uses a number of overseers or inspectors authorised by the Ministry of Agriculture who are presumed to be truthful in their actions. It is currently accredited in compliance with the UNE-EN ISO/IEC 17020 standard and is in the process of implementing and accrediting the UNE-EN ISO/IEC 17065 standard.

Each year the Control department fulfils a series of inspection and control targets, both in person and administratively, under the supervision of the Ministry of Agriculture, at the behest of its director and in agreement with the General Secretary-Director of the Control Board. If they identify any breach of the regulations, the Overseers record it by filing an affidavit which leads to the opening of proceedings of either an administrative or disciplinary nature.

In order to carry out its specific tasks, the Control department enjoys the collaboration and support of the Management Body departments. It also carries out other technical, support and information tasks that are necessary for the proper operation of the Management Body. For example, based on all the information processed by the IT Services department, the Control department generates statistical studies on the production structure, marketing, etc. that are of great interest to the sector. Another example is the collaboration of the Control department's staff in the educational activities organised by the Control Board, such as commented tastings, conferences, etc.

'Nimbus': the new tools of the digital age

The implementation of the Nimbus computer platform, in use since the 2019 harvest, is a key new feature in the Control Board's use of tools that provide its control systems with greater speed and efficiency. This translates into improved traceability of wines and enhanced guarantees of quality and authenticity for consumers.

As it has since software was first introduced for the management of control systems, in 2019 the Control Board invested heavily in upgrading its devices with better features, updating applications and incorporating programmes into a new environment that is more effective in meeting its objectives. The Nimbus software is a case in point, and although it required a tremendous effort from the whole sector, we can confirm that the results were worth it. This software behaves like a self-control system for the wineries, facilitating compliance with the requirements established by current regulations in terms of traceability. Nimbus provides detailed information on the winemaking process and the controls that each wine consignment passes through, from the source of the grapes through to the release of the finished product on the market.

2019 ACTIVITIES

A year of intense activity, with 103,474 vineyard and winery inspections

The current Empowered Overseers Service team, with the support of specially hired technicians, carried out a total of 103,474 inspections during 2019, a 'field' task that took up around two-thirds of their working hours, broken down roughly as follows: 20% to vineyard inspections, 40% to winery inspections, 27% to wine verification, and 13% to harvest supervision. The overseers spent the other

THE CONTROL DEPARTMENT'S ACTIVITIES:

- Management of the Register of Vineyards and the Register of Wineries of the Designation (the data of registrations, cancellations or modifications of ownership are kept permanently updated, as well as the list of different containers and their capacities, and the number and capacity of the barrels of every winery).
- Inspection of the facilities of any winery that applies for registration in the Control Board's Register of Wineries to check that it complies with the provisions of the Designation Specifications for each of the four types of register: winegrowers, storage facilities, cooperatives and ageing facilities.
- Systematic inspection of the protected vineyards, from planting (density, authorised varieties, etc.) to growing practices (pruning, irrigation, etc.).
- Monitoring of the progress of each phenological stage of the vines, including weather incidents, pests and diseases that may affect canopy development and harvest yield.
- Control of grape ripening and management of the rigorous control system established by the Control Board Plenary each year in the Harvest Season Standards in order to guarantee the origin and quality of Rioja wines.
- Implementation and coordination of the rating process of the wines produced each year (the so-called classification), which includes processing the data from laboratory and sensory tests of more than 5,000 samples.
- Management of wine ageing controls (monthly declaration by the wineries on the movement of wines and stocks, reflected in the control sheets of each vintage) and wine marketing.
- Quality control of the wines in the finished product phase, both during the ageing process in the winery (inspections are made in the finished products warehouse for sampling) and in the marketing phase (sampling of wines released for sale).
- Since 2019, product certification audits have been carried out in the wineries based on the criteria established in the UNE-EN ISO/IEC 17065 standard, with the aim of verifying compliance with the requirements established in the Designation Specifications.
- Delivery to the wineries of the guarantee of origin documents (back labels, seals and pilfer capsules), as

Pablo Franco, director of the Control department, in the Control Board's tasting room where the sensory evaluation of the wines is carried out for their classification.

well as monitoring their use by means of winery capacity checks.

- Systematic inspection of the registered wineries for the wine stock capacity in each type of container and checks of their supporting documents.
- Authorisation for the transfer of wines between wineries in the Designation and their analytical and sensory control by means of extensive sampling. Control of the removal from the Designation of the by-products of the winemaking process and any wines that have been refused protection and downgraded.
- Investigation of any complaints about the misuse of the *Denominación de Origen Calificada Rioja* both inside and outside its territory.

third of their time dealing with queries in person or by telephone received at the Control Board headquarters; assessing the verification files of each winemaker; authorizing the transfer of wines and the delivery of Guarantee of Origin Documents; drawing up reports to supplement the inspections of vineyards and wineries or, if required, affidavits; writing reports on the annual growing cycle, including weather incidents and the progress of the harvest in each area; and, finally, constantly assessing any incidents identified in the movement of wines from the wineries.

Similarly, the staff assigned to the IT Section of the Board's Technical Service provided personalised attention by telephone to the numerous queries from grape growers regarding the harvest and the second-year management period for vineyard yields. Meanwhile, ageing facilities, storage facilities, cooperatives and grape growers also required personalised attention to resolve any concerns and incidents arising from issues as varied as wine movements, stocks, standardisations, statistics, etc.

Verification of the 1,316 vineyards planted in 2017

As it has done systematically since 1994, in 2019 the Control Board's Control department conducted on-the-spot checks of all the vineyards planted in 2017 before they went into production, and hence before they were included in the Grape Grower's Card. For this task the Control Board hired 17 specialist staff who, coordinated by the Control department, carried out on-site inspections in June and September, visiting 1,316 wineries across 108 municipalities belonging to 1,004 owners. The purpose of this inspection of vineyards planted in 2017, with prior authorisation from the relevant administration, was to check that the registration data corresponded to the planted vineyard and to verify the vineyard owner's compliance with the Designation's regulations on growing practices, such as vineyard management, pruning, planting density, and correlation between the grape varieties authorised and those actually planted.

Any incidents found are assessed by the Control department and sent to the Legal Services department of the Control Board, which opens an incident file to study the situation. Of the 1,316 vineyards visited, a total of 119 had incidents, mostly of an administrative nature that could be easily resolved, such as changes in planted varieties (49.5%); different planted areas from those authorised (10.5%); errors in plot identification (12%); dif-

Vineyard monitoring: as a noteworthy meteorological incident this season, on 8 July 2019, a hailstorm affected 56 owners and 366 hectares of vineyards, with production damage on the plot exceeding 40%.

Monitoring of grape ripening, intended to determine the most appropriate harvesting dates for each locality

ferent years of plantation or grafting (17%); a percentage of irregularities higher than 15% (5%); rootings (3%); and finally, abandoned or unplanted plots (3%).

During the second quarter of the year, the Board's

Past experience and the improvements of the last fourteen years since the implementation of the Grape Grower's Card have resulted in very positive and satisfactory feedback from registered growers. The aim is to even further optimise the harvesting process, during which the Control department provides an immediate response to any issues arising from the use of grape growers' cards.

The original hard copy grape growers' record books, introduced in 1993, were replaced in 2006 by the current digital system, which has also evolved considerably.

Technical Service reviewed and assessed the files submitted by the different Autonomous Communities that affect the Register of Vineyards (registrations, cancellations, changes in ownership, etc.), processing the data and returning sealed copies to the affected parties. If a vineyard owner does not withdraw his or her Grape Grower's Card at harvest time, or does not justify the reason, he or she is removed from the register. Each cooperative is also sent a list of the grape growers who are registered as members in order to compare them and deal with any changes that have taken place. Once these updates to the Register of Vineyards have been made, the Board issues the corresponding receipts for the collection of the compulsory fees from the grape growers.

X-ray of Rioja wine through 177 'control vineyards'

The Control department selected 177 plots to monitor the progress of vineyards during the 2019 season and compare them with previous seasons, a task for which it has the collaboration of a support technician. These plots are used as a reference for assessing the progress of the various phenological stages, such as bud break, fertility, setting, veraison and ripening, in order to inform the Control Board Plenary and the registered growers of the situation of the vineyard at each stage of the growth cycle. These plots also allow the production expectations and qualitative aspects of each vintage to be monitored continuously.

During the 2019 season, inspections were carried out to identify vineyards with high production levels in order to inform owners about incidents in their vineyards so they could take the necessary corrective measures. To do so, the Control department had the support of 17 technicians who were specially hired for this purpose. There was a prior sampling taken in all the municipalities and 26.543 ha of vineyards across the wine region were inspected. Of these, 626 were found not to conform. Each of the growers with excess yields was notified of the irregular situation so that they could adjust yields to the Harvest Standards at the outset of veraison. Production was adjusted in all of them except for 10 vineyards where proceedings to downgrade the grapes were initiated.

Monitoring of grape ripening, which is intended to determine the most appropriate harvesting dates for each locality, is an important service provided by the Board to the grape growers. In 2019, the harvest took place between 26 August and 30 September. The samples collect-

A total of 144 professionals collaborated with the Board in rating the 2018 harvest

ed by the Board's overseers in the control vineyards were analysed by the accredited laboratories of the three Autonomous Communities and the results were widely disseminated by the Board to grape growers and winemakers through a total of six newsletters giving the weight of the grapes, potential alcoholic strength, total acidity (tartaric acid), pH, malic acid, potassium, TPI, anthocyanins and colour intensity, specifying the data on the grape variety, year of planting, altitude and location of the plot to which each sample analysed belonged.

2019 Harvest Season Standards

The management of the rigorous control system established by the Control Board Plenary in the 2019 Harvest Season Standards to guarantee the origin and quality of Rioja wines was carried out by the Control department's team of overseers with the support of 14 technicians. Their inspection work included monitoring neighbouring areas, randomly checking the harvesting of vineyards and loading of grapes, checking the transfer of grapes and their entry into wineries, verifying grape quality and overseeing the work of the Harvest Supervisors.

In 2019, the Board hired a total of 191 Harvest Su-

pervisors, whose mission was to oversee the delivery and weighing of the grapes on each of the scales located at winemaking premises. Each Harvest Supervisor was equipped with one of the 290 'harvest terminals' in operation this season, which were used to process the data from the grape deliveries corresponding to a total of 14,827 Grape Grower's Cards. These data are transmitted remotely to the Control Board server, providing a constant stream of real-time information on the production and yield of each grape grower and how much wine is being made in each winery.

The Board controls the quality of wines at the marketing stage by taking samples of wines released for sale

In addition to managing the grape growers' cards and processing the data on grape deliveries during the harvest, the IT Service checks and processes around 600 harvest and vinification affidavits submitted by grape growers, winemakers and agers, storage facilities and cooperatives between November and December, checking the data against those collected from the harvest terminals used to manage grape deliveries with the grape growers' cards. Between January and March, the IT Service checked the data on the harvest, production and winemaking processes, issuing vinification reports with the data on protected grapes and wine to the wineries and opening a period for complaints and queries. At the end of this period, a harvest report is also sent to all the grape growers, providing information on the protected harvest and any overproduction figures.

Rating of 2018 vintage wines

The Control department began the process of rating the wines from the 2018 vintage with the early rating requests from 72 wineries during November 2018, which affected 10% of their production. In response to requests from winemakers and with the help of eight specially hired technicians, the programme of systematic sample collection from all the winemakers' tanks lasted from the official start date of 1 December through to 7 March 2019.

In the first stage, 5,212 samples were taken, representing 349.82 million litres of wine from the 2018 vintage made in the DOCa Rioja. The rating process involves

dealing with the files and processing the data obtained from laboratory and sensory tests, and every owner is sent a report on each batch of wine. A second sample was taken of all the disqualified wines against which appeals had been lodged between 13 December 2018 and 9 June 2019, resulting in a total number of 5,353 samples taken during the season, very much higher than usual.

Chemical tests of samples were carried out in the laboratories of the Oenological Stations in the respective Autonomous Communities, free of charge for registered growers. The sensory analyses are carried out in the Control Board's tasting room, which hosted five tastings a day, resulting in a total of 371 tasting sessions conducted by 144 tasters with whose collaboration the Control Board was able to verify the 2018 harvest. These tasters were responsible for determining which of the samples tasted were considered suitable for obtaining DOCa Rioja certification. They also carried out a qualitative assessment of each sample to obtain the overall assessment of the 2018 vintage, which ultimately resulted in a rating of GOOD.

After the rating process, a control sheet is opened for each batch in which all the movements affecting that particular batch of wine are recorded. At the same time, another control sheet is used to ensure that the wines that have been refused certification and downgraded are removed from the winery in accordance with the regulations. In addition to the collaboration of the 144 tasters mentioned earlier, the Control Board invested heavily in other personnel for rating the 2018 vintage, assigning

one-third of the work to the eight official Overseers for three months plus two tasting coordinators and one driver for three months; one secretary for five months, and seven specialists for taking samples for one-and-a-half months.

Winery by winery stock and wine ageing controls

During 2019, the Control department carried out a total of 545 winery stock inspections which were undertaken systematically to check the stocks of wine in different containers (tanks, barrels and bottles) by wine type and vintage, which allows the ageing process to be monitored. The use of the guarantee documents (back labels and seals) by the bottling wineries was also checked at these stock inspections by counting the stocks of those documents to ensure that the quantity matched those delivered by the Board to the winery less those that the winery declared as having been used.

The results of the stock inspections are checked against the data held by the Control Board in its 'vintage and wine movement control sheets', which are submitted by wine ageing facilities, storage facilities, cooperatives and grape growers before the tenth day of each month

and which, as a whole, involve the computer processing of a monthly average of around 7,000 wine movements. Almost all the winery owners now provide this data electronically. As an example of the level of detail reached by this control process, the Board checks the data on compulsory withdrawals due to the losses that occur during the wine's time in the barrel.

In parallel with the wine movement records, the wineries send the Control Board data on marketing in the external market (about 300 declarations per month). Based on these declarations, the Control Board's IT Service compiles statistics on the marketing of Rioja wine compared to the previous year in both the domestic and international markets by type of winery, category and type of wine, etc., which are sent to the members and associations for their information and analysis.

The Control department took 1,432 samples of wines bottled during 2019 in the finished product warehouses of the wineries to control their quality

THE EXCELLENCE OF RIOJA

The Control Board Technical Service, which coordinates the classification process, underscores the superb quality of the 2019 wines

The Control Board of the DOCa Rioja has awarded the 2019 vintage an official rating of EXCELLENT. Optimal ripening at the end of the growth cycle translated into optimal results.

Vine condition and development were excellent throughout the harvest season and the condition of the clusters, which were loose, well aerated and accompanied by moderate plant vigour, produced top quality grapes. Pablo Franco, director of the Control department at the Control Board explained that “the year was marked by stable development in the vineyards, albeit not exempt from a few, highly-localised, weather incidents of little significance in general terms.” This situation became more evident during the month of September, with the harvest taking place in a staggered fashion across the different zones. Good weather made it possible to pick selectively. Yields were moderate and grape quality was excellent.

The Control Board Plenary of the *Denominación de Origen Calificada Rioja* awarded the official rating of EXCELLENT to the 2019 vintage, which has aroused high expectations and will undoubtedly go down in history as one of the great Rioja vintages.

The ‘EXCELLENT’ rating (the first since 2011) is the outcome of a rigorous, transparent classification procedure consisting of laboratory tests and tastings of all the wines intended for sale on the market. The assessment started at the fermentation tanks, where Board technicians collected more than 4,500 samples that were subsequently tasted by a panel of 150 professionals. A total of 267.27 million litres of the 2019 vintage qualified for certification as wines protected by the DOCa Rioja (22.11 ML white, 12.50 ML rosé and 233.08 ML red).

Progress of the growth cycle

The growing season started with a winter with little rainfall that resulted in a somewhat weaker than normal bud break. The green shoots grew less than usual during the first stage of the cycle. This was due to low light levels during the day, relatively cold temperatures and scarce rainfall until late April. Bunch counts per vine taken at the beginning of the cycle were comparatively lower than normal, and this led to a moderate harvest volume.

Rainfall intensified during the month of June, with above average values. At the flowering stage, abundant rains generally resulted in more irregular fruit set. Moderate fertility values and a low bunch count from the start were compounded by fewer berries per bunch after flowering. This prompted moderate production and outstanding grape condition, key factors when it comes to attaining maximum quality.

The official closing of the harvest came early, on 15 October, and the Rioja 2019 vintage amounted to 385 million kg of grapes. This is a moderate figure, about 20% below that of 2018. Total production was 342 million kg of red grapes and 43 million kg of white grapes. By zone, 187 million kilos were processed in Rioja Alta wineries, 109 in Rioja Oriental and 89 in Rioja Alavesa.

Highly structured red wines suitable for ageing

When awarding the 2019 vintage an EXCELLENT rating, the Control Board Plenary highlighted the extraordinary ripening of the grapes, particularly with regards to tannins, as reflected in the report drawn up by the Board's Technical Service, which coordinates the wine classification process. The round, very silky tannins that have characterised the red wines since their vinification, are a very pleasant surprise, as it is still early days and this is also unusual in wines with a polyphenol load as high as this year's. Total polyphenol index (TPI) figures reveal highly structured wines of intense colour, very suitable for ageing.

More than 4,500 tank samples of each and every one of the 2019 wines were tested and tasted, attesting to the highly demanding process that leads to the classification of Rioja wines, making the Region a benchmark of the highest quality in the world of wine.

Meanwhile, lighter hues prevail in the rosé wines, with a predominantly aromatic expression leaning towards floral notes. Pablo Franco concluded his summary by stating that “the white wines are very expressive, with outstanding volume in the mouth, in line with what we found in the reds, underscoring the Region’s commitment to native grape varieties and a great evolution in vinification quality.”

There is no doubt that, in view of vineyard performance, 2019 will be ‘the vintage’. It is a vintage that reflects Rioja grape growers’ and winemakers’ masterful management of key processes.

SALES

A year of transition for Rioja sales in a very complex international context

The DOPa Rioja closed 2019 with a total volume of 255,914,084 litres sold in 124 countries, which represents a slight drop of 2.84% compared to the previous year, although sales value only fell by half of that figure. In a year that could be defined as 'transitional', given the political and economic uncertainties that have affected international markets, it is worth noting that Rioja's final sales results led to a significant recovery compared to the trend that closed 2018 and the figures of the first half of 2019. This is a positive conclusion despite a 2.24% drop in exports, and a 3.18% reduction in domestic sales.

The evolution of Rioja wine sales in 2019 was in line with the general performance of wines of a similar category in international markets. If we take as a reference sales in Rioja's 12 main foreign destinations (United Kingdom, Germany, United States, Switzerland, Netherlands, Sweden, Belgium, China, Canada, Norway, Mexico and Ireland), we see that Rioja represents 2.4% in terms of volume and 2.8% in terms of value of all the bottled wines from all over the world that these countries import, while the average price of Rioja wine is 14.4% above the average (4.67 euros per litre compared to 4.09 euros per litre).

Compared with Spanish wines, 2019 Rioja sales abroad represented 31.5% of the total volume exported by all the Designations of Origin, which was 6.7% lower than the previous year (-2.2% in the case of Rioja). With regard to the value of wine sales abroad, Rioja accounts for 40.8% of the total value of DO wine exports, which in aggregate fell by 4.4% compared to 2018, while Rioja rose 0.8%. The average price of exported Rioja wines was 50% higher than the average for other DO wines (4.81 euros per litre compared to 3.20 euros per litre), a difference that is even greater when compared to Spanish wine exports as a whole, whose average price is 1.12 euros per litre.

A breakdown of Rioja sales by country reveals disparate situations, linked to the events that have marked the course of 2019. Thus, in the United Kingdom, despite the evident transition of a market that concentrates a third of Rioja exports, for now, the DO has managed to halt the decline experienced a year ago, limiting it to a slight fall in volume of 2.87% and a situation of practical stability in terms of value. Another strategic market for Rioja is Germany, where sales fell by 7.93%, although this figure is significantly lower than in previous years. In the case of the United States there was a slight drop in volume

(-1.38%), but which translates into positive values in terms of value.

As for China, already positioned among the main destinations of Rioja, a complicated situation continued to be observed, with a significant drop in sales of 17.72%, which was marked by the instability of this market, something that also significantly affected wine imports from other regions. The remaining export markets were essentially stable or growing, with Rioja sales making significant headway in Russia (+22.86%), Japan (+6.05%), Ireland (+4.79%) and Canada (+3.45%).

On the Spanish market, which absorbs 63% of Rioja sales, these fell by 3.18% in 2019, slightly more than the estimated total for the category of wines protected by a Designation of Origin, translating into a slight loss of market share that nonetheless fails to threaten Rioja's absolute leadership. This leadership is reflected by close to a third of total DO wine sales, a market share that reaches 60% in the case of aged red wines and even 80% if we consider only the on trade, the main sales channel for this type of wine. This means that eight out of every ten bottles of aged red wine sold in this channel are from Rioja.

An analysis of sales of the different types of wine shows that the growth in demand for Rioja continues to be driven by whites and rosés (+11.36% and +14.74% respectively). Strong increases in Rioja rosé sales in Spain (+23.21%) and whites abroad (+18.28%) explain these rises and confirm the sector's effort to adapt its offer to global drinking trends. On the other hand, the sale of red wines weighs down the whole, dropping by 5.07 points, which would be explained mainly by falling sales in the Reserva category. The marked 27.04% rise of Gran Reserva sales in the Spanish market deserves special mention.

The Control Board president, Fernando Salamero, examined the 2019 marketing results at a press conference,

stating that “under the direction of the renowned consultancy firm KPMG, the institution and all the associations that comprise the Board are already working on a Strategic Plan for 2020-2030 that will enable this Designation of Origin to face the new decade with confidence.”

The Control Board president, Fernando Salamero, examined the 2019 marketing results at a press conference, stating that “under the direction of the renowned consultancy firm KPMG, the institution and all the associations that comprise the Board are already working on a Strategic Plan for 2020-2030 that will enable this Designation of Origin to face the new decade with confidence.”
